

Advanced Residential Controls

TRAINING SERIES

Course Description

This course provides an advanced view of control options for M- and P-Series systems. Basic to advanced functions and BACnet integration are covered in detail and supported with hands-on practice. Additionally, the course covers cloud-based solutions for remote and auxiliary control.

Prerequisites

M- and P-Series Installation and Service Essentials

Target Audience

Experienced Service Technicians

Course Duration

1 Day

Educational Credits

NATE: 8 hours

Course Tuition

\$360 per seat

Classroom Requirements

Laptop computer or Internet accessible device

Learning Objectives

- Differentiate control options and perform function setting for M- and P-Series controllers
- Identify and discuss the inputs, outputs, and status connection points
- Apply special function options to M-Series equipment
- Integrate M- and P-Series control equipment into Building Automation Systems
- Explain the integration and configuration settings for third-party system control
- Demonstrate cloud-based control using Mitsubishi Electric Trane HVAC wireless interfaces
