Table of contents

Leading all-electric HVAC innovation for more than 40 years.

Mitsubishi Electric offers innovative and evolving heating and cooling solutions for any application in any climate. Our ducted and ductless mini-split and Variable Refrigerant Flow (VRF) heat pump systems bring superior energy efficiency, comfort, and performance to any home or building. We are proud to provide not only cutting-edge products but also design and technical training and unmatched end-to-end support.

At Mitsubishi Electric, we strive to create better environments, inside and out. The adoption of all-electric heat pumps and sustainable building is more than a trend, it is the future. Discover the balance between enjoying the spaces where you live and work, while creating sustainability for the world around you.

We are renewable in all we do. This encompasses how our products function, leveraging both hybrid, water source, and all-electric heat pumps, and how they're assembled, with nearly 100% recyclable materials.

We offer technology that contractors and customers don't have to think about after installation. In fact, Mitsubishi Electric has one of the industry's lowest incidence rates. Our industry leading warranty is even better when installed by a Diamond Contractor® or Ductless Pro.

We are exacting in how we build our technology, scrutinizing every component to ensure it functions in harmony with the system.

Mitsubishi Electric quality

We are exacting in how we build our technology, scrutinizing every component to ensure it functions in harmony with the system. This is why we manage every step of the manufacturing and assembly process, upholding the highest quality standards from start to finish.

Our customers depend on our heat pump systems to maintain their comfort, even in harsh environments. Because of this, we've developed one of the industry's most rigorous inspection processes. We check for every possible point of failure in every step after the sale: delivery, installation and operation.

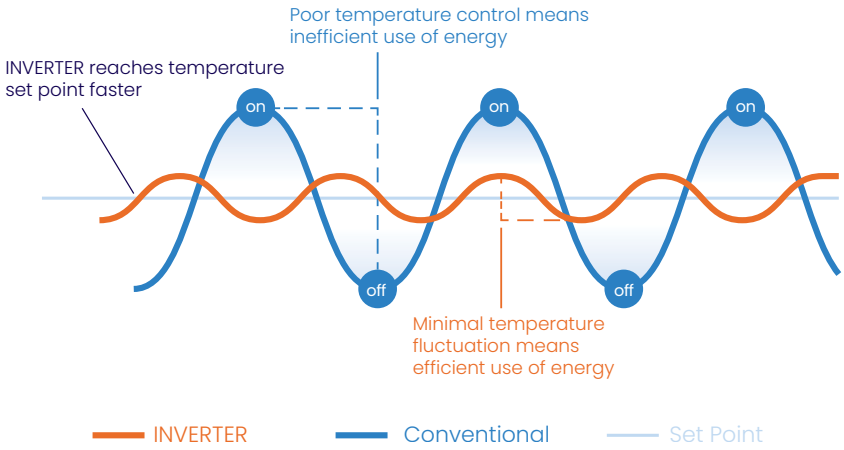
We perform advanced airflow testing during development, where we measure every corner of the room with more than 2,500 sensors to ensure even temperature distribution. An operation noise test is performed in an anechoic chamber with an extremely low 10 dB(A) of background noise. This confirms that the heat pumps run ultra quiet operations, with a minimum sound level of 19 dB(A).

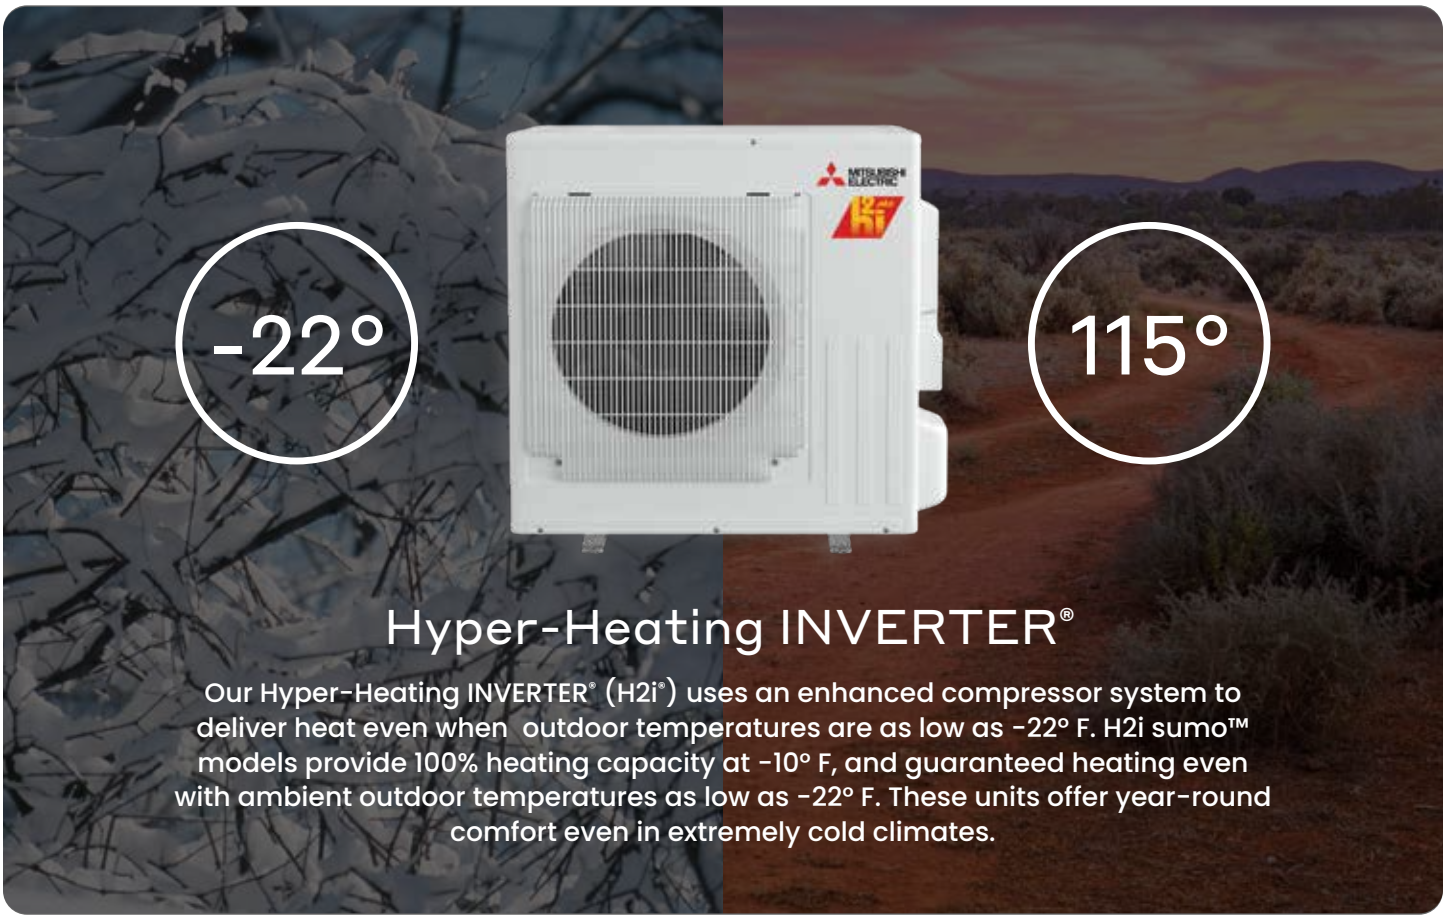
Our products are also subjected to a wide range of safety tests, including combustion testing, to confirm safe operation under various conditions. Combustion testing is done by assuming accidental firing and replicating abnormal conditions that cause breakage of pressure components. With the transition to the low-Global Warming Potential refrigerants, we have built leak detection sensors into our units as an added safety measure. We also perform drop/strength tests, transport vibration tests, and many other product checks to ensure that quality and performance are maintained.

The INVERTER advantage

Mitsubishi Electric heat pumps use inverter-driven compressors, which use variable speed technology to control the speed of the motor. This allows for precise regulation of heating and cooling output according to demand, while minimizing the amount of energy required. Conventional compressors turn on and off to meet the set point, causing large temperature and energy swings. The inverter eliminates the wasteful stop and start cycle. Just as your heart always beats, and automatically beats faster when you exercise, our compressors are always active with the inverter enabling it to adjust conditioning as soon as temperature changes are detected.

INVERTER vs. conventional system operation





Hyper-Heating INVERTER®

Our Hyper-Heating INVERTER® (H2i®) uses an enhanced compressor system to deliver heat even when outdoor temperatures are as low as -22° F. H2i sumo™ models provide 100% heating capacity at -10° F, and guaranteed heating even with ambient outdoor temperatures as low as -22° F. These units offer year-round comfort even in extremely cold climates.

INVERTER features

DC Fan Motor

A highly efficient DC motor drives the fan of the outdoor unit. Efficiency is much higher compared to an equivalent AC motor.

Grooved Piping

High-performance grooved piping is used in heat exchangers to increase the heat exchange area.

Heat Caulking Fixing Method

A Heat Caulking Fixing Method replaced arc spot welding to secure internal parts in place. This change reduces the distortion of internal components, resulting in additional efficiency gains.

Highly Efficient DC Scroll Compressor

Adding a frame compliance mechanism to the DC scroll compressor achieves further efficiency. The mechanism allows movement in the axial direction of the frame supporting the cradle scroll, thereby significantly reducing leakage and friction loss and ensuring high efficiency at all speeds.

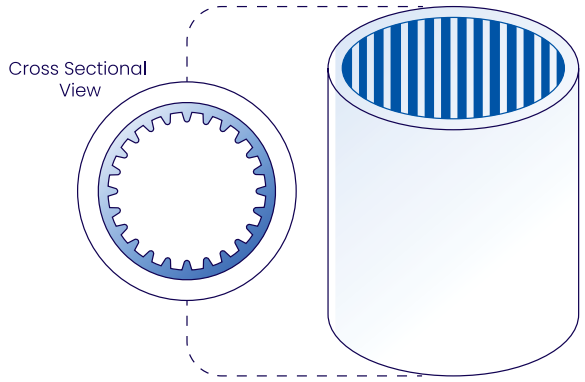
Joint Lap DC Motor

Mitsubishi Electric has developed a unique motor, called the Poki-Poki Motor in Japan, manufactured using a joint lapping technique. This innovative motor operates based on a high-density, high-magnetic force, leading to extremely high efficiency and reliability.

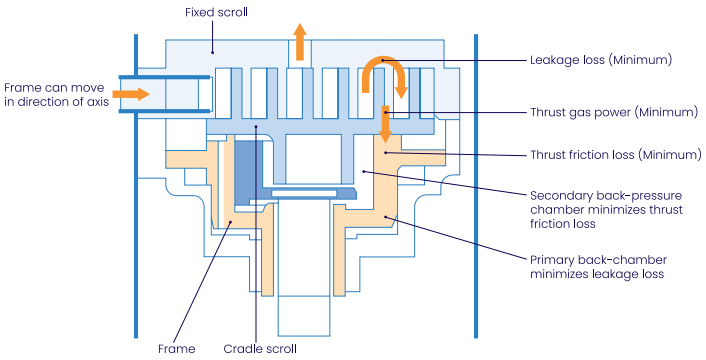
Magnetic Flux Vector Sine Wave Drive

This drive device is a microprocessor that converts the compressor motor's electrical current waveform from a conventional waveform to a sine wave (180°conductance) to achieve higher efficiency by raising the motor winding utilization ratio and reducing energy loss.

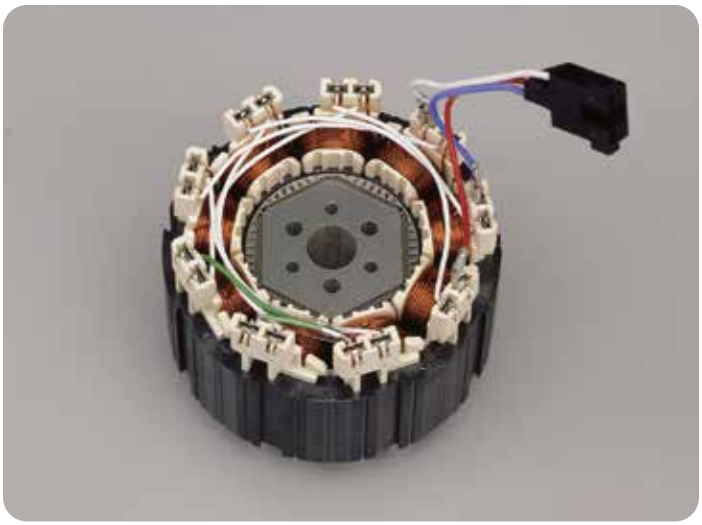
Grooved piping



Highly Efficient DC Scroll Compressor



Joint Lap DC Motor



INVERTER features

PAM (Pulse Amplitude Modulation)

PAM is a technology controlling the current waveform to resemble the supply voltage wave, resulting in reduced loss and more efficient electricity use. PAM control effectively utilizes 98% of the input power supply.

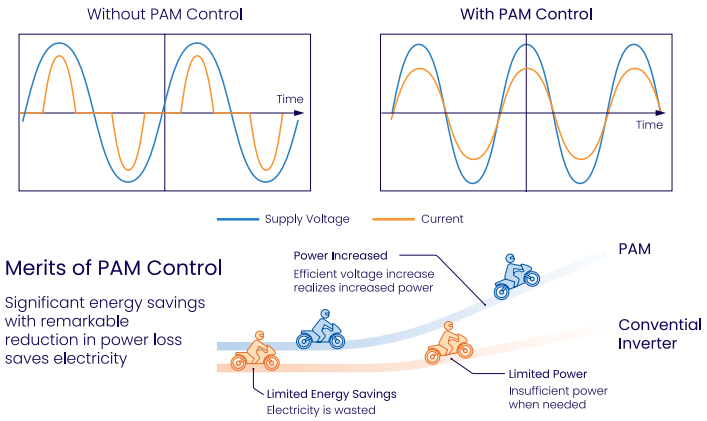
Power Receiver and Twin LEV Control

Mitsubishi Electric developed a power receiver and twin linear expansion valve (LEVs) circuit that optimize compressor performance. This technology ensures ultimate control in response to the operating waveform and outdoor temperature. Tailoring the system to the characteristics of R454B refrigerant improves operational efficiency.

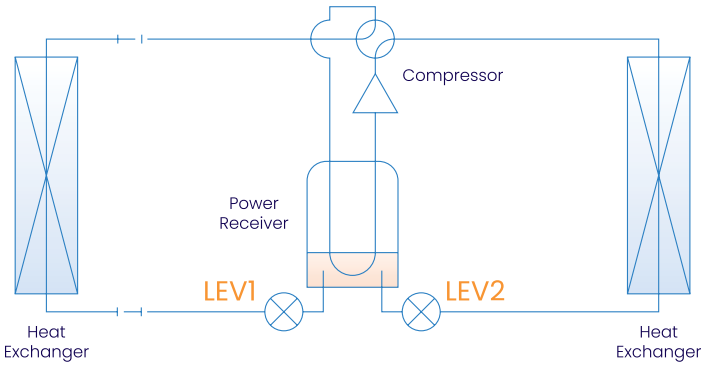
Room Temperature Maintained

The inverter monitors the varying compressor motor frequency and creates the most efficient waveform for the motor speed. This results in improving operating efficiency at all speed ranges, using less power, and reducing annual electricity costs.

PAM (Pulse Amplitude Modulation)



Power Receiver and Twin LEV Control



Reluctance DC Rotary Compressor

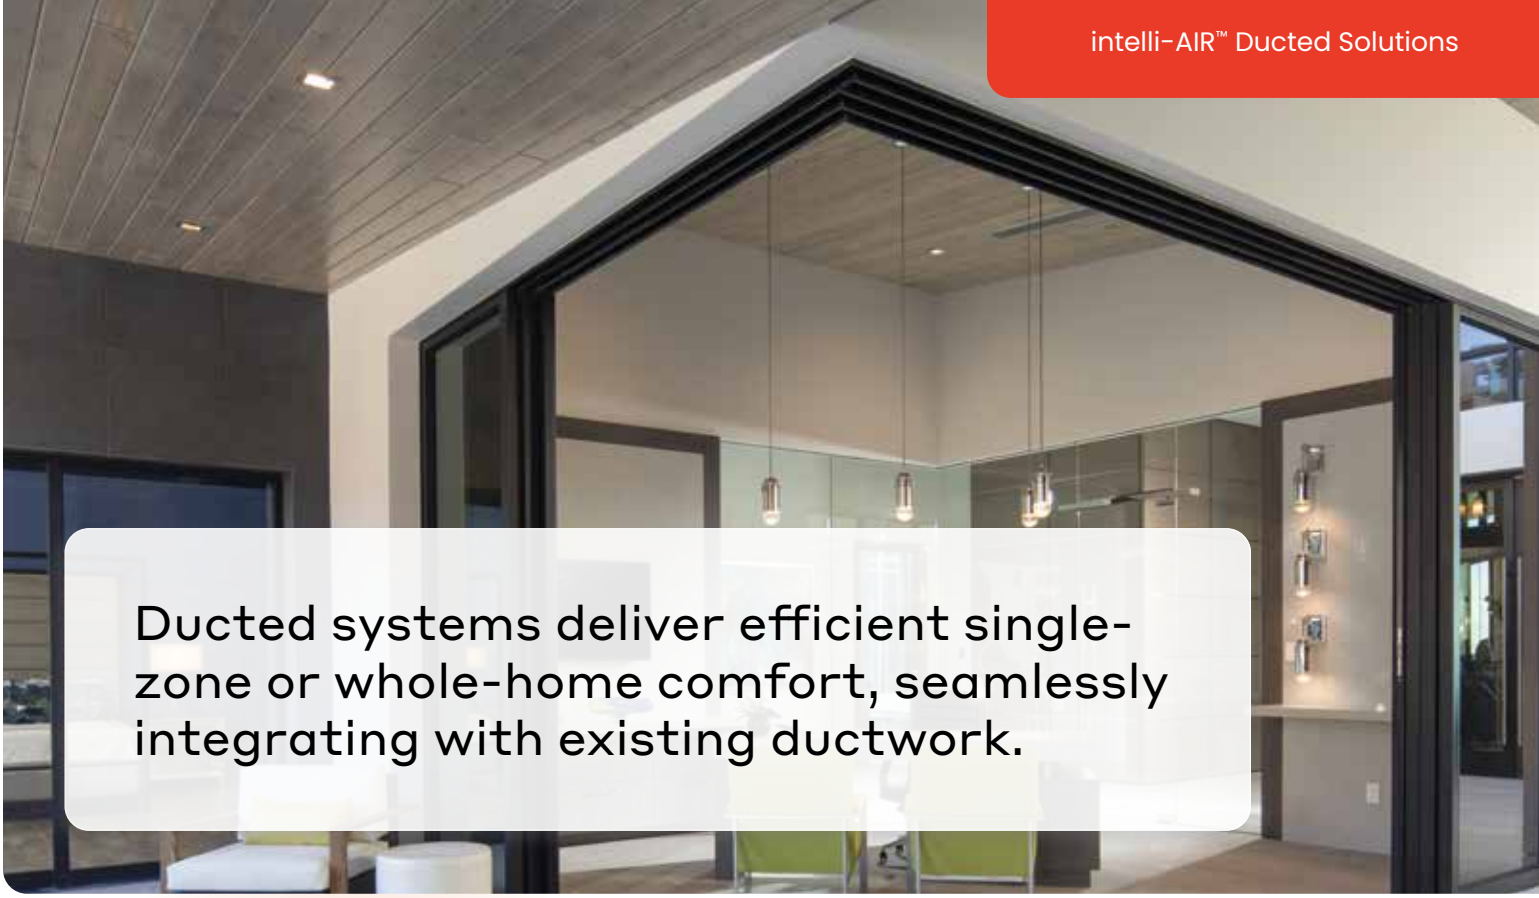
intelli-AIR™

Ducted Solutions



Ducted systems deliver efficient single-zone or whole-home comfort, seamlessly integrating with existing ductwork.

intelli-AIR Ducted systems offer a powerful combination of energy efficiency, quiet operation, and design flexibility. Whether using existing ductwork or integrating concealed air handlers, these all-electric solutions provide consistent, whole-home comfort without disrupting the aesthetic of the space. Ideal for new construction or retrofits, ducted systems deliver reliable heating and cooling while supporting sustainability goals through advanced inverter technology.

Applications

intelli-AIR™ Ducted systems offer a flexible, all-electric solution for whole-home comfort. They're ideal for renovations, replacements, or new construction projects - especially when discreet installation is preferred. These systems can integrate with existing ductwork or use short-run ducts in tight spaces like attics, closets, or crawlspaces. With efficient zoning and consistent airflow, intelli-AIR is a smart choice for maintaining comfort across multiple rooms.

SVZ

Multi-position Air Handler

The SVZ Multi-position Air Handler is a whole-home solution that can replace furnaces or forced-air systems using existing ductwork. It supports upflow, downflow*, and horizontal left/right configurations; and it can be disassembled and reassembled to fit through tight spaces. Built-in control inputs support humidifiers, ERVs, and auxiliary heat. The SVZ is compatible with SUZ single-zone units, with MXZ compatibility available, and comes in 12k – 60k BTU/H models.

Features and details

Features	
ENERGY STAR® and ENERGY STAR COLD CLIMATE certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.[1]
Selectable static pressure	Selectable external static pressures of 0.3, 0.5, or 0.8 in.w.g. with 3 fan speeds at each static setting provides application diversity.
Electrically Commutated Motor (ECM)	The Electrically Commutated Motor (ECM) has an optimized design for efficient fan performance. Quiet operation is achieved with the forward-curved blower, which is positioned to prevent sound from traveling through the ductwork.
Black ZAM material	The cabinet is designed with highly corrosion resistant Black ZAM material, a hot-dip coated steel that has a coated layer of zinc, aluminum and magnesium.
Blow-through design	The blow-through design has a positive pressure cabinet with 1 inch R4.2 rated fiberglass-free insulation and a cabinet air leakage less than 2% at 1.0 in.w.g.[2]
Electric Heat Kits	Optional Electric Heat Kits in capacities ranging from 3kW to 23kW for cold climate or back-up applications are available.
Interlocking Function	This air handler also has an output terminal which allows it to interlock with other appliances such as humidifiers and dehumidifiers.
Efficiency	
SEER2	Up to 19.5
HSPF2	Up to 9.8
COP at 47° F	Up to 3.8
Operating Ranges	
Heating Range	-13° F[2] to 75° F
Cooling Range	14° F to 115° F
Capacities	
12k – 60k BTU/H[3]	

Exceptional efficiency

SVZ systems are ENERGY STAR® ESCC certified[1], SEER2 certified up to 19.5, and HSPF2 certified up to 9.8.

This unit is also compatible with select multi-zone systems. See page 110-111 for full compatibility.

1 Specific combinations qualify
2 For Hyper-Heating INVERTER® (H2i®) models only
3 For SUZ only. For MXZ Ported and SMART MULTI®, refer to compatibility chart

[9]Heating at -13°F (Indoor: 70°F DB, 60°F WB // Outdoor: -13°F DB, -14°F WB)
* Indoor/Outdoor Unit Operating Temperature Range (Cooling Air Temp [Maximum / Minimum]):
• Applications should be restricted to comfort cooling only; equipment cooling applications are not recommended for low ambient temperature conditions.
** Outdoor Unit Operating Temperature Range (Cooling Thermal Lock-out / Re-start Temperatures; Heating Thermal Lock-out / Re-start Temperatures):
• System cuts out in heating mode and automatically restarts at these temperatures.

PVA

Multi-position Air Handler

The PVA Multi-position Air Handler can be configured for horizontal left/right, upflow, and downflow* applications. The unit can be fully disassembled and reassembled easily to fit through small spaces, and features a built-in humidifier, ERV, and auxiliary heat control inputs. This Multi-position Air Handler comes with a built-in refrigerant leak sensor, compatible in a one-to-one system, and is available in 12k - 60k BTU/H models.

*Downflow kit required.

Features and details

Features	
ENERGY STAR® and ENERGY STAR COLD CLIMATE certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.[1]
Selectable static pressure	Selectable external static pressures of 0.3, 0.5, or 0.8 in.w.g. with 3 fan speeds at each static setting provides application diversity.
Electrically Commutated Motor (ECM)	The Electrically Commutated Motor (ECM) has an optimized design for efficient fan performance. Quiet operation is achieved with the forward-curved blower, which is positioned to prevent sound from traveling through the ductwork.
Black ZAM material	The cabinet is designed with highly corrosion resistant Black ZAM material, a hot-dip coated steel that has a coated layer of zinc, aluminum and magnesium.
Blow-through design	The blow-through design has a positive pressure cabinet with 1 inch R4.2 rated fiberglass-free insulation and a cabinet air leakage less than 2% at 1.0 in.w.g.[2]
Electric Heat Kits	Optional Electric Heat Kits in capacities ranging from 3kW to 23kW for cold climate or back-up applications are available.
Interlocking Function	This air handler also has an output terminal which allows it to interlock with other appliances such as humidifiers and dehumidifiers.
Efficiency	
SEER2	Up to 21.2
HSPF2	Up to 9.8
COP at 47° F	Up to 4.2
Operating Ranges	
Heating Range	-13° F[3] to 70° F
Cooling Range	23° F to 115° F
Capacities	
12k – 60k BTU/H[4]	

Exceptional efficiency

PVA systems are ENERGY STAR® ESCC certified[1], SEER2 certified up to 21.2, and HSPF2 certified up to 9.8.

1 Specific combinations qualify
2 Tested in accordance with ASHRAE Standard 193
3 For Hyper-Heating INVERTER® (H2i®) models only
4 For SUZ only. For MXZ Ported and SMART MULTI®, refer to compatibility chart

PVA: Standard heat pump

*Indoor/Outdoor Unit Operating Temperature Range (Cooling Air Temp [Maximum / Minimum]):
• Wind baffles required to operate below 23°F DB in cooling mode.
• Heat pump system with wind baffle: 0°F - 115°F.
• Refer to wind baffle documentation for further information.
** Outdoor Unit Operating Temperature Range (Cooling Thermal Lock-out / Re-start Temperatures; Heating Thermal Lock-out / Re-start Temperatures):
• System cuts out in heating mode and automatically restarts at these temperatures.

[1]Cooling at 95°F (Indoor: 80°F DB, 67°F WB // Outdoor: 95°F DB, 75°F WB)

* Indoor/Outdoor Unit Operating Temperature Range (Cooling Air Temp [Maximum / Minimum]):

- Wind baffles required to operate below 23°F DB in cooling mode.
- Cooling-only system with advanced wind baffle: -40°F - 115°F.
- Refer to wind baffle documentation for further information.

** Outdoor Unit Operating Temperature Range (Cooling Thermal Lock-out / Re-start Temperatures):

intelli-HEAT™

PAA Dual-fuel system

New slim control box can be mounted separately from the main unit for flexible installation.

The intelli-HEAT™ Dual-fuel system consists of an all-electric heat pump and coil that integrates with an existing gas furnace.[2]

This system can provide powerful air conditioning on hot days and determine the best source of heat (gas or electricity) on cold days, maximizing efficiency and comfort. The indoor unit is compatible with both single- and multi-zone outdoor units. A multi-zone outdoor unit can connect to other ducted or ductless indoor units for fixing hot or cold spots or dividing a large zone into smaller, more controlled zones. The PAA also includes a built-in refrigerant leak sensor for added safety.

With **intelligent switchover**, intelli-HEAT™ automatically switches between efficient electric heating and gas furnace backup, plus all-electric cooling year-round.

Features and details

Features	
ENERGY STAR® and ENERGY STAR COLD CLIMATE certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.[1]
Air conditioning	Replace an old AC unit or add new air conditioning to an entire home for all-electric, energy-efficient comfort. The intelli-HEAT can pair with cooling-only air-conditioning systems.
Furnace compatible	The control box directs the switchover between electric heating and gas furnace-provided heat. Most of the time, the system is set to switchover based on an economic setpoint, using the form of energy that will cost the least. However, when indoor temperatures are not maintained in a specific time frame due to extreme cold exceeding unit capacity, intelli-HEAT™ will switch over to gas furnace heating to maintain comfort. The system will then slowly return to the original economic setpoint and unlearn the switchover temperature.[2]
Intelligent Switchover	The intelli-HEAT™ Intelligent Switchover function automatically switches from the all-electric heat pump heating to the gas furnace based on the ambient temperature to optimize economic and lower carbon footprint priorities. When indoor temperatures are not maintained for 24-29 minutes due to extreme cold, the system switches to the gas furnace heating automatically to ensure consistent comfort.
Eco-efficiency	Variable speed technology and smart controls significantly reduce fossil fuel usage and greenhouse gas emissions.
Flexible installation	The a-coil can be installed in vertical, downflow, and horizontal left/right orientations. The control box can be mounted anywhere, such as the side of the cased coil or on a wall/stud.
Compact control box	The control boxes have a sleek, modern design and an advanced circuit board to streamline installation and setup through easy configuration and quick-connect push terminals for hassle-free wiring. Dedicated terminals for precise 2-fan speed control are available in both single- and multi-zone systems.
Oxygen-free copper coils	Oxygen-free copper coils are designed to resist corrosion and help to extend the lifespan of the coil compared to standard copper.
Efficiency	
SEER2	Up to 18.1
HSPF2	Up to 9.4
COP at 47° F	Up to 4.0
Operating Ranges	
Heating Range	-13° F[3] to 70° F
Cooling Range	23° F to 115° F
Capacities[4]	
PUY/PUZ: 18k – 42k BTU/H **PUZ H2i:** 24k – 42k BTU/H	

Exceptional efficiency

Select intelli-HEAT™ systems are ENERGY STAR® ESCC certified[1], SEER 2 certified up to 18.1, and HSPF2 certified up to 9.4.

This unit is also compatible with select multi-zone systems. See page 110-111 for full compatibility.

1 Specific combinations qualify
2 Mitsubishi Electric air-conditioner and heat pump systems should only be connected with ANSI-Z21.47/CSA2.3 certified furnaces
3 For Hyper-Heating INVERTER® (H2i®) models only
3 For MXZ Ported and SMART MULTI, refer to compatibility chart

intelli-HEAT™: Standard heat pump

[1]Cooling at 95°F (Indoor: 80°F DB, 67°F WB // Outdoor: 95°F DB, 75°F WB)

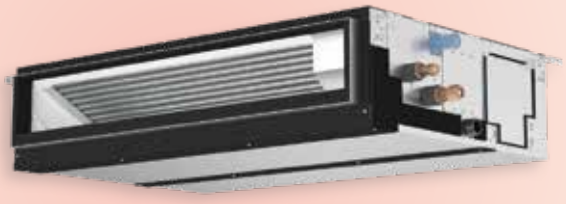
* Indoor/Outdoor Unit Operating Temperature Range (Cooling Air Temp [Maximum / Minimum]):

- Wind baffles required to operate below 23°F DB in cooling mode.
- Cooling-only system with advanced wind baffle: -40°F - 115°F.
- Refer to wind baffle documentation for further information.

** Outdoor Unit Operating Temperature Range (Cooling Thermal Lock-out / Re-start Temperatures):

PEAD

Mid-static Horizontal-ducted Indoor Unit



PEAD Mid-static Horizontal-ducted Indoor Units offer low capacities suitable for residential needs and larger capacities ideal for light commercial uses such as offices, retail, and restaurants. These ducted solutions are capable of serving large spaces or multiple rooms supplied by a longer duct run. The PEAD comes with a built-in refrigerant leak sensor, compatible in a one-to-one system.

Features and details

Features	
ENERGY STAR® and ENERGY STAR COLD CLIMATE certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.[1]
Five-stage external static pressures	These ducted units incorporate five-stage external static pressures (0.14 – 0.60 in.w.g) and three fan speed selections, providing application diversity.
Compact design	The PEAD has a height of 9-7/8 inches for all models of the series from 09 to 42k BTU/H. This makes it possible for the unit to be installed in low ceilings with minimal clearance space.
Built-in condensate lift mechanism	The built-in condensate lift mechanism removes water that is collected during operation.
Efficiency	
SEER2	Up to 21.7
HSPF2	Up to 11.5
COP at 47° F	Up to 4.2
Operating Ranges	
Heating Range	-13° F[2] to 70° F, -4° F to 75° F (SUZ and PUZ combinations)
Cooling Range	23° F to 115° F (SUZ H2i and PUY/PUZ, and SUZ combinations)
Capacities[3]	
SUZ (standard and H2i): 9k–36k BTU/H PUY/PUZ: 12k, 18k, 24k, 30k, 36k, 42k BTU/H PUZ H2i: 24k–42k BTU/H	

Exceptional efficiency

PEAD systems are ENERGY STAR® ESCC certified[1], SEER2 certified up to 21.7, and HSPF2 certified up to 11.5.

This unit is also compatible with select multi-zone systems. See page 110-111 for full compatibility.

1 Specific combinations qualify
2 For H2i models only
3 For MXZ Ported and SMART MULTI®, refer to compatibility chart

PEAD: Standard heat pump

[6]Heating at -4°F (Indoor: 70°F DB, 60°F WB // Outdoor: -4°F DB, -5°F WB)

* Indoor/Outdoor Unit Operating Temperature Range (Cooling Air Temp [Maximum / Minimum]):
• Applications should be restricted to comfort cooling only; equipment cooling applications are not recommended for low ambient temperature conditions.
** Outdoor Unit Operating Temperature Range (Cooling Thermal Lock-out / Re-start Temperatures; Heating Thermal Lock-out / Re-start Temperatures):
• System cuts out in heating mode and automatically restarts at these temperatures.

PEAD: Hyper-heating heat pump

[1]Cooling at 95°F (Indoor: 80°F DB, 67°F WB // Outdoor: 95°F DB, 75°F WB)

* Indoor/Outdoor Unit Operating Temperature Range (Cooling Air Temp [Maximum / Minimum]):

- Wind baffles required to operate below 23°F DB in cooling mode.
- Cooling-only system with advanced wind baffle: -40°F - 115°F.
- Refer to wind baffle documentation for further information.

** Outdoor Unit Operating Temperature Range (Cooling Thermal Lock-out / Re-start Temperatures):

SEZ

Low-static Horizontal-ducted Indoor Units

SEZ Horizontal-ducted Indoor Units are designed to heat and cool one or two rooms through a short duct run. These units may be mounted in the attic, hidden in the ceiling or beneath the floor, or concealed behind a soffit. Only the intake-air grille and outlet vents are visible when using the SEZ ceiling-concealed indoor unit. The compact design requires minimal space and installs in buildings with lowered ceilings or attics.

Features and details

Features	
ENERGY STAR® and ENERGY STAR COLD CLIMATE certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.[1]
Five-stage external static pressures	These ducted units incorporate five-stage external static pressures (0.14 – 0.20 in.w.g) and three fan speed selections, providing application diversity.
Built-in condensate lift mechanism	The built-in condensate lift mechanism removes water that is collected during operation.
Optional filters	Optional filter boxes are available for high efficiency filtration, offering MERV 13 filters.
Efficiency	
SEER2	Up to 19.1
HSPF2	Up to 10.6
COP at 47° F	Up to 3.8
Operating Ranges	
Heating Range	-13° F[2] to 75° F
Cooling Range	14° F to 115° F
Capacities[2]	
SUZ (standard and H2i): 9k – 18k BTU/H	

Exceptional efficiency

SEZ systems are ENERGY STAR® ESCC certified[1], SEER2 certified up to 19.1, and HSPF2 certified up to 10.6.

This unit is also compatible with select multi-zone systems. See page 110-111 for full compatibility.

Ductless Single-zone

Systems

Ductless single-zone systems provide targeted comfort to any room or zone.

Single-zone, or one-to-one, systems are typically installed on an exterior-facing wall and are connected to the outdoor unit by two small refrigerant pipes, no ductwork required. The high-performance indoor units eliminate problem hot and cold spots with operation that is both whisper-quiet and energy-efficient. The indoor units come in a variety of styles to fit practically any room aesthetic and decor.

Applications

These ductless single-zone systems are perfect for individual spaces that need added heating or cooling. These can include rooms like home offices, basements, garages or attics, and home additions. Rooms situated at the end of long duct runs, often bedrooms, can also benefit from the addition of a mini-split to add customizable comfort to the space.

MSZ-FX

FX Deluxe Wall-mounted Indoor Unit

With a sleek, modern design, the FX Deluxe Wall-mounted Indoor Unit is our most advanced indoor unit yet. The Wi-Fi enabled FX provides precise comfort and exceptional energy efficiency to any space, with convenient control options and premium features.

Our most powerful all-climate technology yet

H2i Sumo™ offers 100% heating capacity at an outdoor temperature of **-10° F with guaranteed operation down to -22° F**.

Features and details

Features	
H2i sumo™	100% heating capacity at an outdoor temperature of -10° F with guaranteed operation down to -22° F.
ENERGY STAR® and ENERGY STAR® COLD CLIMATE certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.[1]
3D i-see Sensor®	The advanced sensor scans the room to produce a complete thermal profile based on size, temperature and movement, then adjusts temperature and airflow based on user preference, and saves energy according to room occupancy.
Dual Barrier Coating	Patented Dual Barrier Coating technology reduces the collection of contaminants like dust, fibers, smoke, and oil on inner surfaces, such as the air pathway, heat exchanger, and fan wheel of the indoor unit, resulting in optimal airflow and easier maintenance.
Dual Barrier Fusion	Patented Dual Barrier Fusion technology reduces the collection of contaminants like dust, fibers, smoke, and oil on the vanes of the indoor unit. Dual Barrier Fusion's shielding power is fused directly into the material of the horizontal and vertical vanes during manufacturing to maintain effectiveness and longevity of the components, and to promote vane cleanliness and reduce odors.
Smart Dry+	The Smart Dry+ mode intelligently controls the fan and compressor speed to ensure optimum moisture removal. When in Smart Dry+ mode, the fan speed is precisely reduced to keep the heat exchanger at the optimum temperature for continuous moisture removal while minimizing over-cooling.
Aux Heating+	Aux Heating+ allows for the integration of additional heating sources that can activate when the set point deviates beyond a selected temperature range for a specified amount of time. This enables the user to optimize energy efficiency while maintaining comfort.
Dual-Vane	The Dual-Vane feature on the Deluxe Wall-mounted Indoor Unit allows for airflow direction to be set independently using two vanes, which can then deliver airflow across wide areas of a room, levels of a zone, or to two people in different locations at the same time.
Econo Cool	Econo Cool temporarily and automatically adjusts the airflow based on heat exchanger temperature. The set temperature is increased slightly, which saves energy, while maintaining comfort.
Built-in Wi-Fi	Wi-Fi enabled units pair with the Comfort app for complete control over temperature, fan speeds, modes, schedules, and more.
Efficiency	
SEER2	Up to 35
HSPF2	Up to 13.3
COP at 47° F	Up to 4.94
Operating Ranges	
Heating Range	-22° F to 75° F DB (heating thermal lock-out: -34° F; heating thermal restart: -23° F)

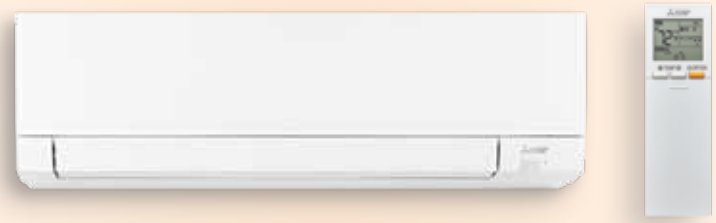
[10]Heating at -22°F (Indoor: 70°F DB, 60°F WB // Outdoor: -22°F DB, -23°F WB)
* Indoor/Outdoor Unit Operating Temperature Range (Cooling Air Temp [Maximum / Minimum]):
• Applications should be restricted to comfort cooling only; equipment cooling applications are not recommended for low ambient temperature conditions.
** Outdoor Unit Operating Temperature Range (Cooling Thermal Lock-out / Re-start Temperatures; Heating Thermal Lock-out / Re-start Temperatures):
• System cuts out in heating mode and automatically restarts at these temperatures.

MSZ-GX

GX Premier Wall-mounted Indoor Unit



The GX Premier Wall-mounted Indoor Unit combines sleek matte finish design, whisper-quiet performance, and energy-efficient comfort for any home. The unit has built-in Wi-Fi and comes with an array of other advanced features.

The versatile GX offers three options: cooling-only, standard heat pump, and H2i® for reliable heating in even the coldest climates. The GX can also pair with Mitsubishi Electric's multi-zone outdoor units for multi-zone setups.

Features and details

Features	
Hyper-Heating Inverter® (H2i®)	Models provide 100% heating capacity at 5° F and guarantee heating even with outdoor temperatures as low as -22° F. These units offer year-round comfort even in extremely cold climates.
ENERGY STAR® and ENERGY STAR® COLD CLIMATE certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.[1]
Dual Barrier Coating	Patented Dual Barrier Coating technology reduces the collection of contaminants like dust, fibers, smoke, and oil on inner surfaces, such as the air pathway, heat exchanger, and fan wheel of the indoor unit, resulting in optimal airflow and easier maintenance.
Smart Dry Mode	Smart Dry Mode finely adjusts the fan speed and compressor speed to ensure optimum moisture removal. At some points when Smart Dry mode is in operation, the compressor will stop to prevent over-cooling and keep the heat exchanger at the optimum temperature for moisture removal.
Aux Heating+	Aux Heating+ allows for the integration of additional heating sources that can activate when the set point deviates beyond a selected temperature range for a specified amount of time. This enables the user to optimize energy efficiency while maintaining comfort.
Powerful Mode	Powerful Mode utilizes the capabilities of the inverter-driven system to temporarily drop or raise the set point and increase fan speed for 15 minutes, quickly bringing the room to the desired temperature.
Self Clean Mode	Self Clean Mode helps to dry the components inside the indoor unit such as the heat exchanger to prevent moisture build-up and odors. When Self Clean Mode is activated, fan operation starts after cooling/dry mode and runs for 25 minutes without preventing the next cooling cycle from starting as needed, ensuring that comfort is maintained.
Built-in Wi-Fi	Wi-Fi enabled units pair with the Comfort app for complete control over temperature, fan speeds, modes, schedules, and more.
Efficiency	
SEER2	Up to 28.4
HSPF2	Up to 11
COP at 47° F	Up to 4.85
Operating Ranges	
Heating Range (H2i®)	-22° F to 75° F DB (heating thermal lock-out: -34° F; heating thermal restart: -23° F)
Heating Range	-5° F to 75° F DB (heating thermal lock-out: -14° F; heating thermal restart: -4° F)
Cooling Range	14° F to 115° F DB (cooling thermal lock-out: -1° F; cooling thermal restart: 3° F)
Capacities	
6k[2], 9k, 12k, 15k, 18k, 24k, 30k, 36k BTU/H	

Exceptional efficiency

GX systems are is ENERGY STAR® ESCC certified[1], SEER2 certified up to 28.4, and HSPF2 certified up to 11.

This unit is also compatible with select multi-zone systems. See page 110-111 for full compatibility.

1 Specific combinations qualify
2 Multi-zone connection only for MSZ-GX06NL

MSZ-GX: Standard heat pump

MSZ-EX

EX Designer Wall-mounted Indoor Unit

The EX elevates the comfort of a space while also enhancing the decor. Available in black, silver, and white color options, the sleek, modern, low-depth design blends into a wide variety of room styles. The indoor unit is compatible with SUZ single-zone and MXZ ported outdoor units.

Features and details

Features	
ENERGY STAR® and ENERGY STAR COLD CLIMATE certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.*
Dual Barrier Coating	Patented Dual Barrier Coating technology reduces the collection of contaminants like dust, fibers, smoke, and oil on inner surfaces, such as the air pathway, heat exchanger, and fan wheel of the indoor unit, resulting in optimal airflow and easier maintenance.
New remote controller	Manage comfort settings like temperature and fan operation from a convenient handheld remote controller. Reduce wasted energy consumption by using the weekly timer to turn off the unit and eliminate temperature setting adjustments. The controller also has an easy-to-read backlit display with helpful error codes.
Econo Cool	Econo Cool temporarily and automatically adjusts the airflow based on heat exchanger temperature. The set temperature is increased slightly, which saves energy, while maintaining comfort.
Efficiency	
SEER2	Up to 21.7
HSPF2	Up to 12.9
COP at 47° F	Up to 4.3
Operating Ranges	
Heating Range	-13° F[2] to 75° F
Cooling Range	14° F to 115° F
Capacities	
9k, 12k, 15k, 18k BTU/H	

Exceptional efficiency

EX systems are ENERGY STAR® ESCC certified[1], SEER2 certified up to 21.7, and HSPF2 certified up to 12.9.

This unit is also compatible with select multi-zone systems. See page 110-111 for full compatibility.

1 Specific combinations qualify
2 For Hyper-Heating INVERTER® (H2i®) models only

MSZ-EX: Standard heat pump

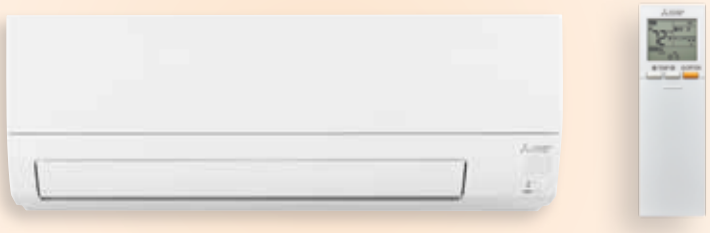
MSZ-HX

Wall-mounted Indoor Unit



The HX offers energy-efficient operation and a slim, flat panel design to bring ultimate comfort to any room. This indoor unit is equipped with innovative features to elevate homeowner comfort and pairs with a single-zone outdoor heat pump.

Smart Dry Mode

Experience optimal humidity control without over-cooling

Features and details

Features	
ENERGY STAR® certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.
Dual Barrier Coating (fan only)	The patented Dual Barrier Coating reduces the collection of contaminants like dust, fibers, smoke, and oil on the blower wheel of the heat pump, resulting in optimal airflow and easier maintenance.
Smart Dry Mode	Smart Dry Mode finely adjusts the fan speed and compressor speed to ensure optimum moisture removal. At some points when Smart Dry mode is in operation, the compressor will stop to prevent over-cooling and keep the heat exchanger at the optimum temperature for moisture removal.
New remote controller	Manage comfort settings like temperature, fan operation, and Self Clean mode from a convenient handheld remote controller. Reduce wasted energy consumption by using the weekly timer to turn off the unit and eliminate temperature setting adjustments. The controller also has an easy-to-read backlit display with helpful error codes.
Econo Cool	Econo Cool temporarily and automatically adjusts the airflow based on heat exchanger temperature. The set temperature is increased slightly, which saves energy, while maintaining comfort.
Self Clean Mode	Self Clean Mode helps to dry the components inside the indoor unit such as the heat exchanger to prevent moisture build-up and odors. When Self Clean Mode is activated, fan operation starts after cooling/dry mode and runs for 25 minutes without preventing the next cooling cycle from starting as needed, ensuring that comfort is maintained.
Blue Fin Coating	An anti-corrosion treatment applied to the aluminum fins of the heat exchanger of the outdoor unit to protect against corrosion caused by salt, sulfur, and other airborne contaminants, especially in coastal and industrial areas.
Efficiency	
SEER2	Up to 20
HSPF2	Up to 10
COP at 47° F	Up to 3.61
Operating Ranges	
Heating Range	-5° F to 75° F
Cooling Range	14° F to 115° F
Capacities	
9k, 12k, 18k, 24k BTU/H	

Exceptional efficiency

HX systems are ENERGY STAR® certified, and SEER2 certified.

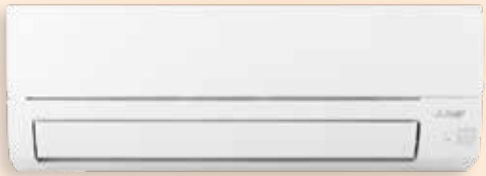
MSZ-WX

Wall-mounted Indoor Unit



The WX provides personalized, energy-efficient comfort to any room or zone. Complimentary to a wide variety of decors with its stylish flat panel design, the indoor unit is equipped with customizable settings and advanced features and pairs with a single-zone heat pump outdoor unit.

Electrostatic Enzyme Filter

Charged with static electricity, the optional filter is designed to attract and trap charged particles which can include airborne non-living particulates.

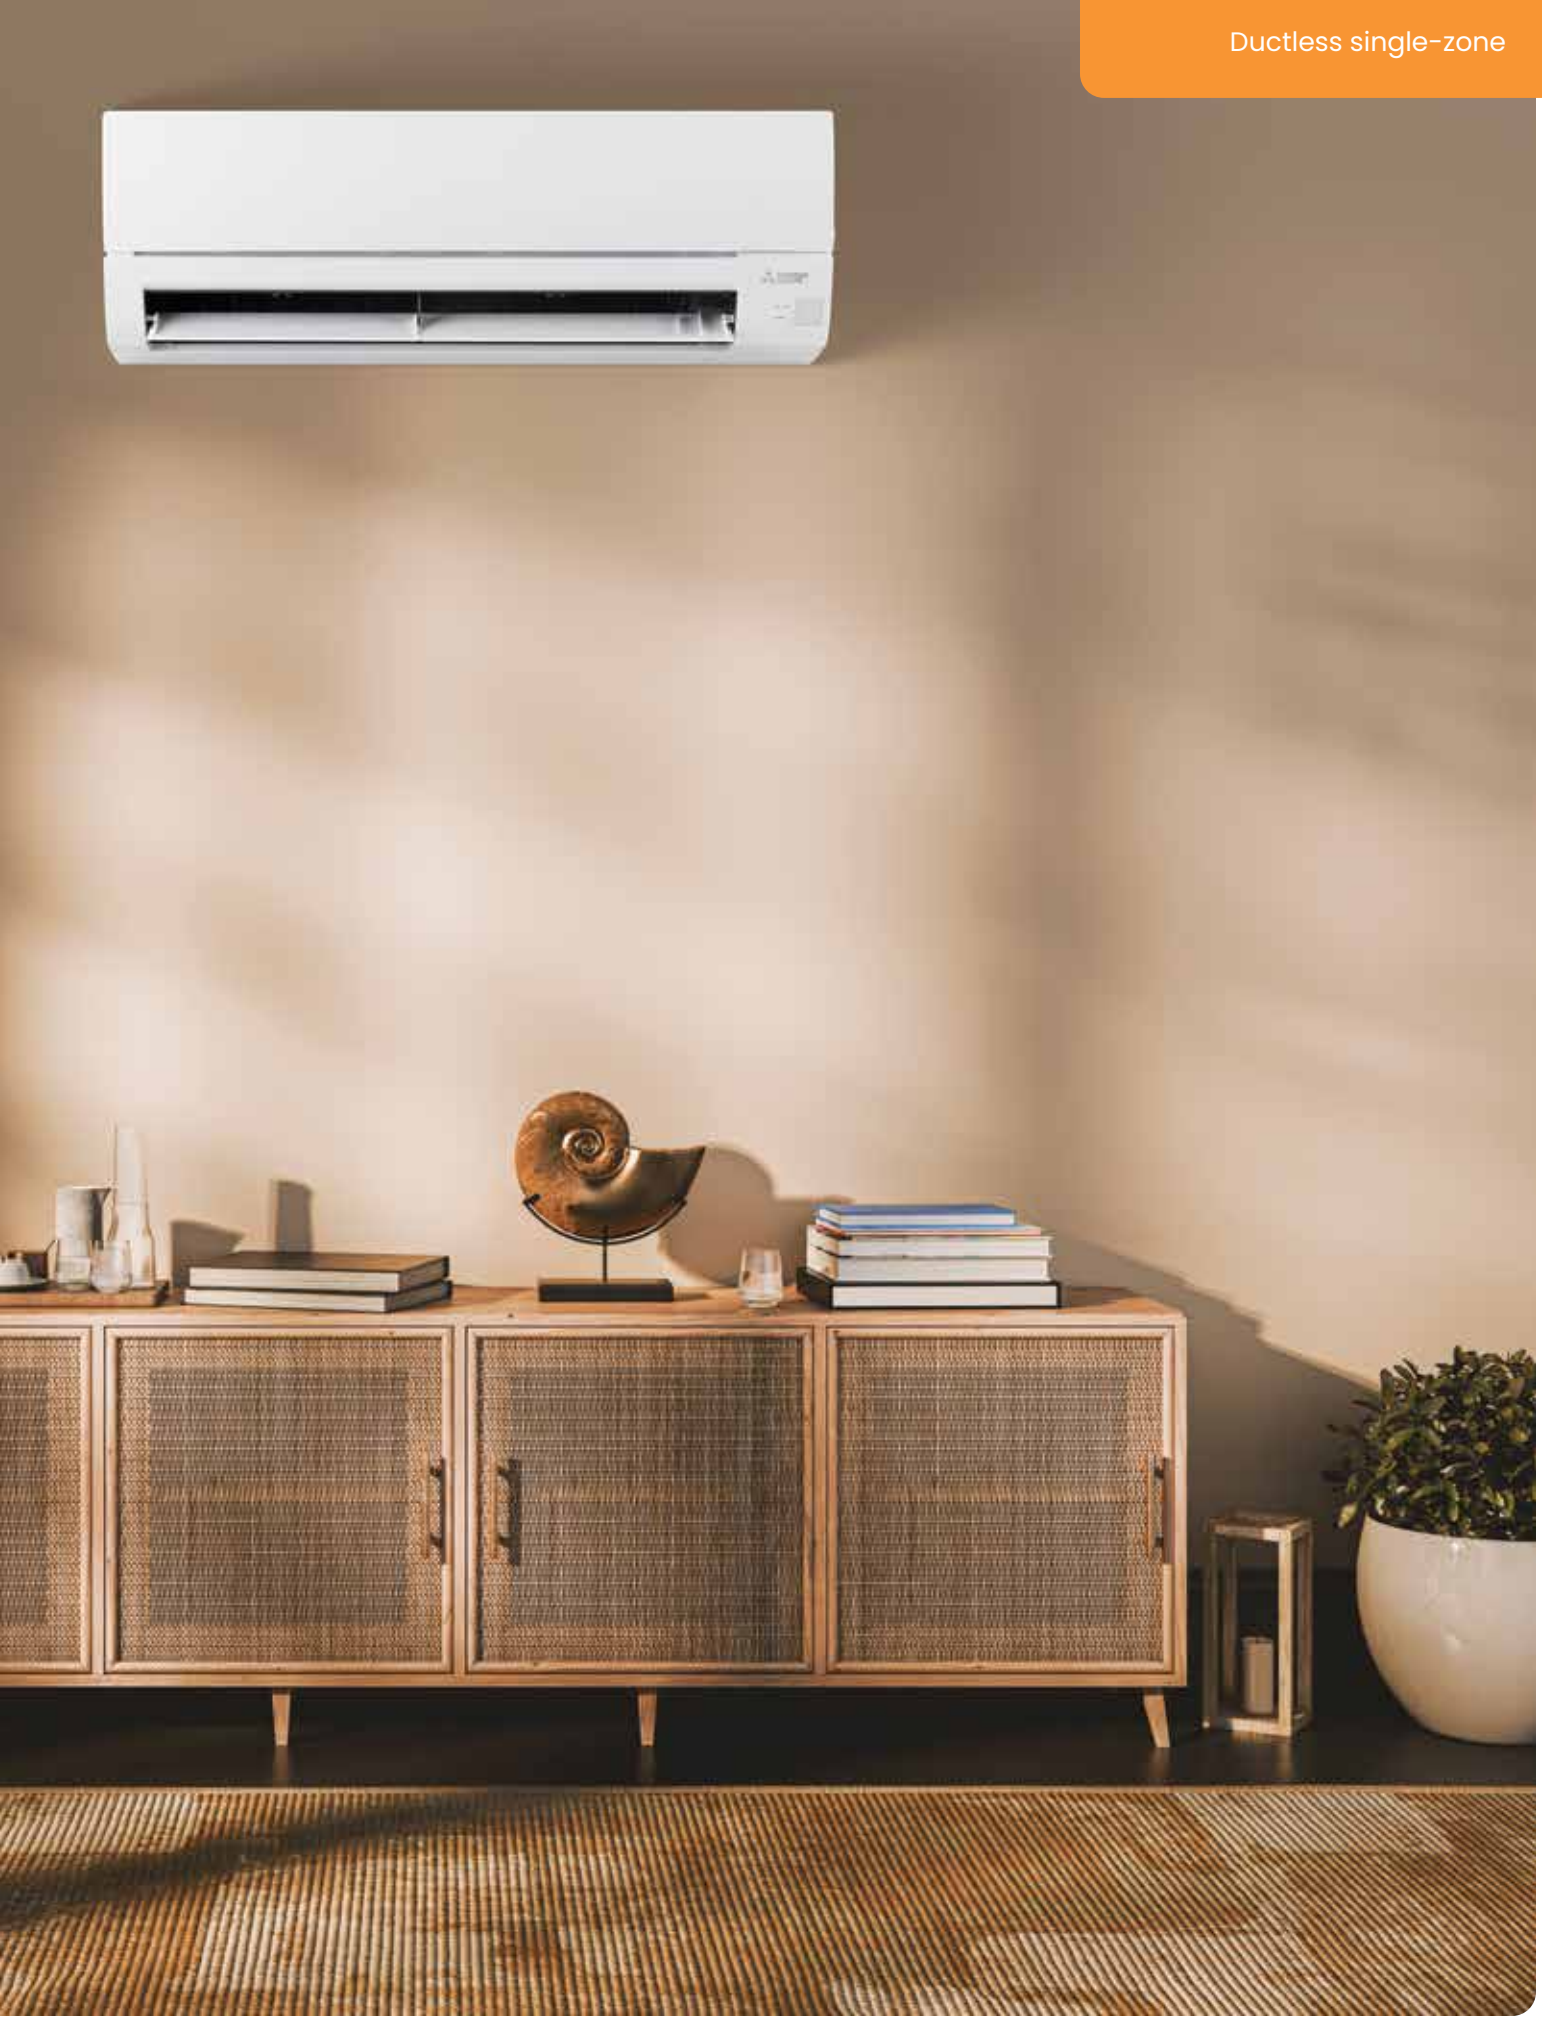
* Indoor/Outdoor Unit Operating Temperature Range (Cooling Air Temp [Maximum / Minimum]):
• Applications should be restricted to comfort cooling only; equipment cooling applications are not recommended for low ambient temperature conditions.
** Outdoor Unit Operating Temperature Range (Cooling Thermal Lock-out / Re-start Temperatures; Heating Thermal Lock-out / Re-start Temperatures):
• System cuts out in heating mode and automatically restarts at these temperatures.



MSZ-JX

115V Wall-mounted Indoor Unit

The MSZ-JX 115V Wall-mounted Indoor Unit provides targeted and customizable comfort to any room or zone with its one-to-one configuration. This unit is designed for spaces with more unique or challenging electrical infrastructure. Perfect for areas with only 115V electrical service or crowded panels where two breakers aren't available for a 208/230V unit, this unit provides efficient heating and cooling without the need for electrical upgrades. The JX unit pairs with a single-zone outdoor unit.

Plug in, chill out

Designed to run on standard 115V power, the JX is ideal for spaces like cabins, detached garages, and sheds.

Features and details

Features	
ENERGY STAR® and ENERGY STAR® COLD CLIMATE certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.
Dual Barrier Coating (fan only)	The patented Dual Barrier Coating reduces the collection of contaminants like dust, fibers, smoke, and oil on the blower wheel of the heat pump, resulting in optimal airflow and easier maintenance.
Smart Dry Mode	Smart Dry Mode finely adjusts the fan speed and compressor speed to ensure optimum moisture removal. At some points when Smart Dry mode is in operation, the compressor will stop to prevent over-cooling and keep the heat exchanger at the optimum temperature for moisture removal.
Self Clean Mode	Self Clean Mode helps to dry the components inside the indoor unit such as the heat exchanger to prevent moisture build-up and odors. When Self Clean Mode is activated, fan operation starts after cooling/dry mode and runs for 25 minutes without preventing the next cooling cycle from starting as needed, ensuring that comfort is maintained.
Built-in Wi-Fi	Wi-Fi enabled units pair with the Comfort app for complete control over temperature, fan speeds, modes, schedules, and more
New remote controller	Manage comfort settings like temperature, fan operation, and Self Clean mode from a convenient handheld remote controller. Reduce wasted energy consumption by using the weekly timer to turn off the unit and eliminate temperature setting adjustments. The controller also has an easy-to-read backlit display with helpful error codes.
Econo Cool	Econo Cool temporarily and automatically adjusts the airflow based on heat exchanger temperature. The set temperature is increased slightly, which saves energy, while maintaining comfort.
Blue Fin Coating	An anti-corrosion treatment applied to the aluminum fins of the heat exchanger of the outdoor unit to protect against corrosion caused by salt, sulfur, and other airborne contaminants, especially in coastal and industrial areas.
Efficiency	
SEER2	Up to 20
HSPF2	Up to 10
COP at 47° F	Up to 3.61
Operating Ranges	
Heating Range	-5° F to 75° F
Cooling Range	14° F to 115° F
Capacities	
9k, 12k BTU/H	

Exceptional efficiency

JX systems are ENERGY STAR® ESCC certified, SEER2 certified up to 20, and HSPF2 certified up to 10.

ELECTRIC

MFZ

Floor-mounted Indoor Unit

The MFZ Floor-mounted Indoor Unit mounts low on the wall with the ability to be partially or fully recessed, offering an attractive alternative to conventional baseboard heaters and radiators. Its unique vane system ensures precise airflow control for optimal comfort. The MFZ is compatible with SUZ Single-zone and MXZ outdoor units.

Features and details

Features	
ENERGY STAR® and ENERGY STAR COLD CLIMATE certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.[1]
Sleep Mode	Comfort is maximized even when the homeowner is asleep. The preferred sleep temperature is preset 30 minutes before bed, then the unit automatically adjusts to meet the set temperature at the end of the timer.
Rapid Heat Technology	Rapid Heat Technology's advanced sensors are coupled with Intuitive Control Logic and multi-flow vanes to initially direct warm air downward as well as into the conditioned space. When the warmed air reenters the indoor unit, it is heated a second time, resulting in optimal running temperatures in the shortest amount of time possible with maximum energy efficiency.
Self Clean Mode	Self Clean Mode helps to dry the components inside the indoor unit such as the heat exchanger to prevent moisture build-up and odors. When Self Clean Mode is activated, fan operation starts after cooling/dry mode and runs for 25 minutes without preventing the next cooling cycle from starting as needed, ensuring that comfort is maintained.
Built-in Wi-Fi	Wi-Fi enabled units pair with the Comfort app for complete control over temperature, fan speeds, modes, schedules, and more.
New remote controller	Manage comfort settings like temperature, fan operation, and Self Clean mode from a convenient handheld remote controller. Reduce wasted energy consumption by using the weekly timer to turn off the unit and eliminate temperature setting adjustments. The controller also has an easy-to-read backlit display with helpful error codes.
Econo Cool	Econo Cool temporarily and automatically adjusts the airflow based on heat exchanger temperature. The set temperature is increased slightly, which saves energy, while maintaining comfort.
Multi-flow vane	Three uniquely shaped vanes control the airflow and allow for customized comfort according to preference.

* Indoor/Outdoor Unit Operating Temperature Range (Cooling Air Temp [Maximum / Minimum]):
• Applications should be restricted to comfort cooling only; equipment cooling applications are not recommended for low ambient temperature conditions.
** Outdoor Unit Operating Temperature Range (Cooling Thermal Lock-out / Re-start Temperatures; Heating Thermal Lock-out / Re-start Temperatures):
• System cuts out in heating mode and automatically restarts at these temperatures.

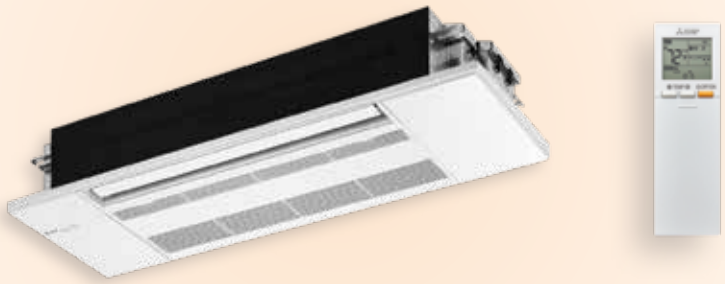
EZ FIT®

MLZ Ceiling-recessed Cassette



The EZ FIT® Ceiling-recessed Indoor Unit is designed to fit between standard ceiling joists, creating a flush appearance that is attractive to homeowners familiar with the sight of conventional vents. High/low ceiling airflow settings and automatic vane control provide personalized comfort, and the ability to fully service the unit from the bottom simplifies the maintenance process.

Just the right fit

The EZ FIT® is designed to be installed between two standard ceiling joists

Features and details

Features	
ENERGY STAR® and ENERGY STAR COLD CLIMATE certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.[1]
Sleep Mode	Comfort is maximized even when the homeowner is asleep. The preferred sleep temperature is preset 30 minutes before bed, then the unit automatically adjusts to meet the set temperature at the end of the timer.
Dual Barrier Coating (fan only)	The patented Dual Barrier Coating reduces the collection of contaminants like dust, fibers, smoke, and oil on the blower wheel of the heat pump, resulting in optimal airflow and easier maintenance.
Dual-level airflow	Engineered to accommodate varied ceiling heights, this is a key feature for adjusting airflow effectively for the height of the ceiling.
Built-in Wi-Fi	Wi-Fi enabled units pair with the Comfort app for complete control over temperature, fan speeds, modes, schedules, and more.
New remote controller	Manage comfort settings like temperature, fan operation, and Self Clean mode from a convenient handheld remote controller. Reduce wasted energy consumption by using the weekly timer to turn off the unit and eliminate temperature setting adjustments. The controller also has an easy-to-read backlit display with helpful error codes.
Econo Cool	Econo Cool temporarily and automatically adjusts the airflow based on heat exchanger temperature. The set temperature is increased slightly, which saves energy, while maintaining comfort.
Built-in condensate lift mechanism	The built-in condensate lift mechanism removes water that is collected during operation.
Efficiency	
SEER2	Up to 20.9
HSPF2	Up to 12.2
COP at 47° F	Up to 3.8
Operating Ranges	
Heating Range	-13° F[3] to 75° F
Cooling Range	14° F to 115° F
Capacities	
6k[2], 9k, 12k, 18k BTU/H	

Exceptional efficiency

EZ FIT® systems are ENERGY STAR® ESCC certified[1], SEER2 certified up to 20.9, and HSPF2 certified up to 12.2.

This unit is also compatible with select multi-zone systems. See page 110-111 for full compatibility.

Features and details

Features	
ENERGY STAR® and ENERGY STAR COLD CLIMATE certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.[1]
3D i-see Sensor®[2]	The advanced sensor scans the room to produce a complete thermal profile based on size, temperature and movement, then adjusts temperature and airflow based on user preference, and saves energy according to room occupancy.
3D Turbo Fan	The patented 3D Turbo Fan with a two-stage blade structure ensures low noise operation while maintaining high airflow.
Outside air intake	A duct opening is provided, which allows outside air to be brought inside so it can be heated or cooled.
Horizontal airflow mode	Horizontal airflow control eliminates uncomfortable drafts.
Dual-level airflow	Engineered to accommodate varied ceiling heights, this is a key feature for adjusting airflow effectively for the height of the ceiling.
Built-in condensate lift mechanism	The built-in condensate lift mechanism removes water that is collected during operation.
Temporary suspension hook-on grille	The unit comes equipped with a temporary suspension hook-on grille, improving efficiency during installation. The unit can be installed without removing screws on the corner panel and control box.
Efficiency	
SEER2	Up to 21
HSPF2	Up to 11.8
COP at 47° F	Up to 3.8
Operating Ranges	
Heating Range	-13° F[3] to 75° F
Cooling Range	14° F to 115° F
Capacities	
9k, 12k, 15k, 18k BTU/H	

Exceptional efficiency

The SLZ-AF is ENERGY STAR® ESCC certified[1], SEER2 certified up to 21, and HSPF2 certified up to 11.8.

This unit is also compatible with select multi-zone systems. See page 110-111 for full compatibility.

PKA

Wall-mounted Indoor Unit

The energy-efficient PKA Wall-mounted Indoor Unit is designed with a capacity range that makes it ideal for larger spaces like daycare centers, classrooms, churches, small offices, and more. The unit's flat panel design and white color make it an attractive heating and cooling solution for any of these applications. It's also available in a cooling-only model to meet the needs of specific environments.

Features and details

Features	
ENERGY STAR® and ENERGY STAR COLD CLIMATE certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.[1]
Auto-Vane Close	The vane will close automatically when the unit is not running, creating a sleek, flat finish that is aesthetically pleasing.
Remote control options	Multiple wired and wireless remote control options are available, for maximum convenience depending on application need.
Efficiency	
SEER2	Up to 21.1
HSPF2	Up to 10.1
COP at 47° F	Up to 4.1
Operating Ranges	
Heating Range	-13° F[2] to 70° F
Cooling Range	23° F to 115° F
Capacities	
12k, 18k, 24k, 30k, 36k BTU/H	

Exceptional efficiency

The PKA-AL is ENERGY STAR® ESCC certified[1], SEER2 certified up to 21.1, and HSPF2 certified up to 10.1.

Powerful cooling for larger spaces

The PKA's cooling-only configuration delivers efficient, reliable performance where heating isn't needed.

1 Specific combinations qualify
2 For Hyper-Heating INVERTER® (H2i®) models only

PKA: Standard heat pump

[1]Cooling at 95°F (Indoor: 80°F DB, 67°F WB // Outdoor: 95°F DB, 75°F WB)

* Indoor/Outdoor Unit Operating Temperature Range (Cooling Air Temp [Maximum / Minimum]):
- Wind baffles required to operate below 23°F DB in cooling mode.
- Cooling-only system with advanced wind baffle: -40°F - 115°F.
- Refer to wind baffle documentation for further information.

** Outdoor Unit Operating Temperature Range (Cooling Thermal Lock-out / Re-start Temperatures):

PLA

Four-way Ceiling-recessed Cassette

The PLA Four-way Ceiling-recessed Indoor Unit can be easily installed into a 3' x 3' suspended ceiling grid, where it is mounted flush with the ceiling. Four multi-directional vanes can be customized to provide 72 unique airflow patterns to accommodate many different room layouts. The PLA includes a built-in refrigerant leak sensor when connected to a MXZ-SM system.*

Product family

Indoor Units

PLA-AE12-48NL

Outdoor Units

Cooling only

PUY-AK12-18NL | PUY-AH24-30NL | PUY-AK36-48NL

Standard heat pump

Hyper-heating heat pump

PUZ-AK24-48NLHZ

*Not compatible in a one-to-one system
*Grilles sold separately

Features and details

Features	
ENERGY STAR® and ENERGY STAR COLD CLIMATE certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.[1]
3D i-see Sensor®	The advanced sensor scans the room to produce a complete thermal profile based on size, temperature and movement, then adjusts temperature and airflow based on user preference, and saves energy according to room occupancy.
3D Turbo Fan	The patented 3D Turbo Fan with a two-stage blade structure ensures low noise operation while maintaining high airflow.
3D Total Flow Unit Accessory	This optional accessory allows air to be delivered diagonally, in addition to the left/right airflows, creating uniform airflow through a space.
Outside air intake[2]	A duct opening is provided, which allows outside air to be brought inside so it can be heated or cooled.
Branch duct run	Heat or cool an additional space by connecting to the duct opening, eliminating the need for an additional unit.
Horizontal airflow mode	Horizontal airflow control eliminates uncomfortable drafts.
Individual vane settings	Individual vane settings provide direct and indirect airflow control. This eliminates uncomfortable drafts and provides improved airflow control with six different discharge angles.
Built-in condensate lift mechanism	The built-in condensate lift mechanism removes water that is collected during operation.
Temporary suspension hook-on grille	The unit comes equipped with a temporary suspension hook-on grille, improving efficiency during installation. The unit can be installed without removing screws on the corner panel and control box
Efficiency	
SEER2	Up to 24.8
HSPF2	Up to 10.9
COP at 47° F	Up to 4.7
Operating Ranges	
Heating Range	-13° F[3] to 70° F
Cooling Range	23° F to 115° F
Capacities	
12k, 18k, 24k, 30k, 36k, 42k, 48k BTU/H	

Exceptional efficiency

The PLA-AE is ENERGY STAR® ESCC certified[1], SEER2 certified up to 24.8, and HSPF2 certified up to 10.9.

This unit is also compatible with select multi-zone systems. See page 110-111 for full compatibility.

1 Specific combinations qualify
2 Optional
3 For Hyper-Heating INVERTER® (H2i®) models only

PLA: Standard heat pump

[1]Cooling at 95°F (Indoor: 80°F DB, 67°F WB // Outdoor: 95°F DB, 75°F WB)
[2]Heating at 47°F (Indoor: 70°F DB, 60°F WB // Outdoor: 47°F DB, 43°F WB)
[3]Heating at 17°F (Indoor: 70°F DB, 60°F WB // Outdoor: 17°F DB, 15°F WB)
[5]Heating at 5°F (Indoor: 70°F DB, 60°F WB // Outdoor: 5°F DB, 4°F WB)
[9]Heating at -13°F (Indoor: 70°F DB, 60°F WB // Outdoor: -13°F DB, -14°F WB)
*Indoor/Outdoor Unit Operating Temperature Range (Cooling Air Temp [Maximum / Minimum]):
• Wind baffles required to operate below 23°F DB in cooling mode.
• Heat pump system with wind baffle: 0°F - 115°F.
• Refer to wind baffle documentation for further information.
** Outdoor Unit Operating Temperature Range (Cooling Thermal Lock-out / Re-start Temperatures; Heating Thermal Lock-out / Re-start Temperatures):
• System cuts out in heating mode and automatically restarts at these temperatures.

PLA: Cooling only

[1]Cooling at 95°F (Indoor: 80°F DB, 67°F WB // Outdoor: 95°F DB, 75°F WB)

* Indoor/Outdoor Unit Operating Temperature Range (Cooling Air Temp [Maximum / Minimum]):
- Wind baffles required to operate below 23°F DB in cooling mode.
- Cooling-only system with advanced wind baffle: -40°F - 115°F.
- Refer to wind baffle documentation for further information.

** Outdoor Unit Operating Temperature Range (Cooling Thermal Lock-out / Re-start Temperatures):

PCA

Ceiling-suspended Indoor Unit

The PCA Ceiling-suspended Indoor Unit is ideal for larger spaces like retail stores, commercial kitchens, classrooms, and office spaces that require longer airflow distribution. The unit is equipped with advanced features like automatic air-speed adjustment and high/low ceiling modes for maximum comfort and application versatility.

Features and details

Features	
ENERGY STAR® and ENERGY STAR COLD CLIMATE certified	Products that earn the ENERGY STAR label are independently certified to meet strict energy efficiency specifications set by the U.S. EPA to save you energy and money and help protect the environment.*
High/Low-ceiling modes	These modes adjust the airflow volume to match the ceiling height, allowing it to heat and cool a variety of spaces.
Automatic air-speed adjustment	Automatic Air-Speed Adjustment Mode adjusts the air-speed to conditions that match the room environment. At the start of a heating/cooling operation, the airflow is set to high speed to quickly heat or cool a room. When the room reaches the desired temperature, the airflow speed is decreased for comfortable heating and cooling operation.
Outside air intake[2]	A duct opening is provided, which allows outside air to be brought inside so it can be heated or cooled.
Remote control options	Wired and wireless remote control options are available, for maximum convenience depending on application need.
Optional drain pump	By installing the optional drain pump, condensate from the unit can be pushed up as high as 23-5/8 inches above the ceiling surface.
Efficiency	
SEER2	Up to 22.2
HSPF2	Up to 9.9
COP at 47° F	Up to 4.1
Operating Ranges	
Heating Range	-13° F[3] to 70° F
Cooling Range	23° F to 115° F
Capacities	
24k, 30k, 36k, 42k BTU/H	

Exceptional efficiency

The PCA-AK is ENERGY STAR® ESCC certified[1], SEER2 certified up to 22.2, and HSPF2 certified up to 9.9.

1 Specific combinations qualify
2 Optional
3 For Hyper-Heating INVERTER® (H2i®) models only

PCA: Standard heat pump

[1]Cooling at 95°F (Indoor: 80°F DB, 67°F WB // Outdoor: 95°F DB, 75°F WB)

* Indoor/Outdoor Unit Operating Temperature Range (Cooling Air Temp [Maximum / Minimum]):
- Wind baffles required to operate below 23°F DB in cooling mode.
- Cooling-only system with advanced wind baffle: -40°F - 115°F.
- Refer to wind baffle documentation for further information.

** Outdoor Unit Operating Temperature Range (Cooling Thermal Lock-out / Re-start Temperatures):

Single-zone
Outdoor Units

Single-zone outdoor units deliver reliable, energy-efficient comfort in a slim, quiet design.

Engineered for residential and light commercial applications, Single-zone systems are made for robust, reliable operation, making them an ideal option for spaces with low ambient conditions. Single-zone Outdoor Units use our inverter technology to use only the precise amount of energy required to heat and cool an indoor zone. They are designed with a slim footprint, for maximum application versatility, and engineered for ultra quiet operation.

PUZ: Standard and Hyper-heating heat pump

The PUZ Outdoor Unit offers a wide temperature operation range, easily fitting many climate conditions. Long piping lengths enable system design flexibility for applications such as apartment buildings, churches, or strip malls.

Capacities: 12k to 60k BTU/H

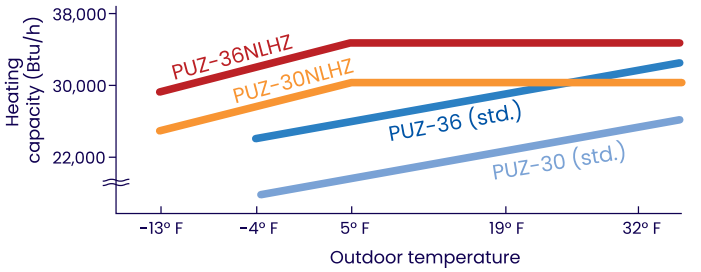
PUY: Cooling only

The PUY Model cooling-only unit provides cooling, even in cold climate low ambient conditions. It boasts a small footprint for versatile installation and application needs. A control algorithm allows for stable continuous operation to meet cooling requirements all year round.

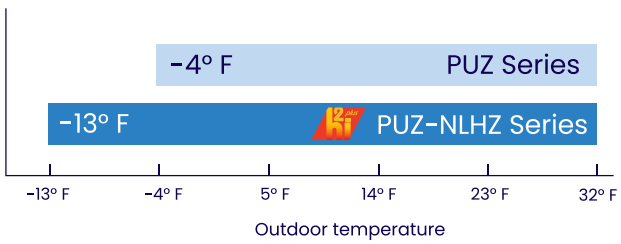
Capacities: 12k to 60k BTU/H

Powerful performance in low temperatures

Approximately 30% higher than model one size larger (example of 30k Btu/h model)



Guaranteed heating operation range is extended To -13° F ambient temperature



Flash injection

In cold weather, refrigerant density drops and system capacity decreases. To compensate, compressor speed increases, which can raise discharge temperatures and pressure ratios, risking damage.

Our **patented flash injection technology** solves this by injecting low-pressure, low-temperature vapor directly into the compressor to maintain performance and protect the system. It also achieves set temperatures faster without oversizing, maintains high efficiency even in extreme cold, enables quick recovery after defrost cycles, and prevents compressor overheating for long-term reliability.

Flash injection is available on select PUZ-AK, SUZ-AK, and MXZ-SM outdoor units.

Single-zone system features

PUY, PUZ, PUZ-NLHZ

Features	
Hyper-Heating Inverter® (H2i®)	Hyper-Heating INVERTER® models provide heating even in ambient outdoor temperatures as low as -13° F, producing up to 100% heating capacity at 5° F. These units offer year-round comfort even in extreme climates.
Flash injection	As temperatures drop outside, the compressor speeds up to maintain indoor comfort. The flash injection process supplies a small amount of cooler refrigerant back to the compressor, reducing excess heat from increased speeds; allowing it to run faster and produce high heating performance. This also enables the system to achieve set points faster, maintain efficiency, and recover quickly after a defrost cycle.
Low ambient cooling	By optimizing the fan speed control in low ambient temperatures, the PUY Series can offer 100% cooling capacity down to -40° F*.
Pre-charged refrigerant	For PUZ/PUY 12-30k BTU/H capacities, the pre-charged piping length matches the maximum piping length. The pre-charged piping length is up to 100ft for 36-60k BTU/H capacities.
Advanced fan design	The fan blade has been optimized in conjunction with the chassis design to increase airflow while reducing sound levels, resulting in lower energy usage and high heat exchange efficiency.
Seacoast protection	Seacoast protection is included in all outdoor units. The coated base panel and Blue Fin coated heat exchanger are rated for a duration of 2,000 hours, per ASTM B117 Standard. Blue Fin Coating is a treatment applied to the aluminum fins of the heat exchanger of the outdoor unit to protect against corrosion caused by salt, sulfur, and other airborne contaminants, especially in coastal and industrial areas.
Back up rotation	When backup or redundancy is required for critical cooling applications, the backup rotation function allows the units to alternate operation for an even number of hours, using only one controller for both units.
Efficiency

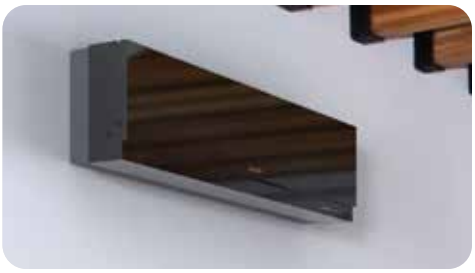
SUZ Universal

Outdoor Units

One outdoor unit, many solutions

The SUZ Universal Outdoor Unit is compatible with seven different ducted and ductless indoor units in a Single-zone configuration. With piping lengths up to 100 feet, this unit is a great fit for large home and multi-family applications.



All-climate comfort

There are both standard and Hyper-Heating SUZ models available, allowing these units to provide comfort in any climate.

Features and details

Features	
Hyper-Heating Inverter® (H2i®)	Hyper-Heating INVERTER® models provide heating even in ambient outdoor temperatures as low as -13° F, producing up to 100% heating capacity at 5° F. These units offer year-round comfort even in extreme climates.
Flash injection	As temperatures drop outside, the compressor speeds up to maintain indoor comfort. The flash injection process supplies a small amount of cooler refrigerant back to the compressor, reducing excess heat from increased speeds; allowing it to run faster and produce high heating performance. This also enables the system to achieve set points faster, maintain efficiency, and recover quickly after defrost cycle.
Piping lengths/ heights	Maximum piping length is 100 feet for the SUZ-09, SUZ-12, and SUZ-15 Hyper-Heating models and maximum height difference is 50 feet.
Heating operation range	Standard SUZ heat pumps have a minimum heating operation range of -4° F and a heating cut-out at -14° F.
Blue Fin Coating	Particularly beneficial in coastal areas, this anti-corrosion treatment applied to the aluminum fins of the heat exchanger of the outdoor unit prevents the corrosion caused by salt, sulfur, and other airborne contaminants that impact efficiency and performance. Blue Fin coatings are rated, per ASTM B117 Standard, for a duration of 2,000 hours.

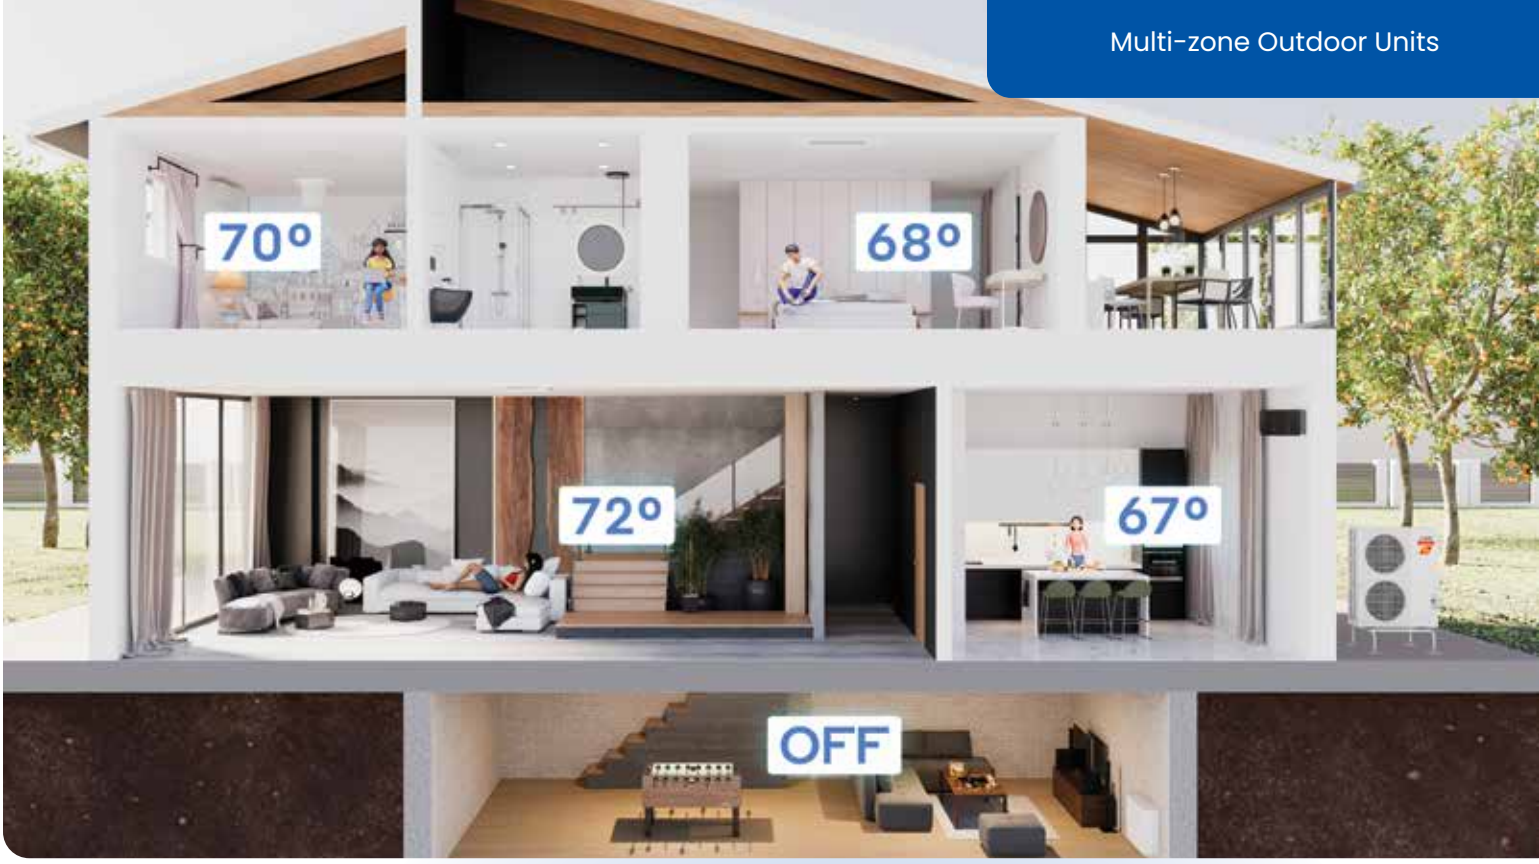
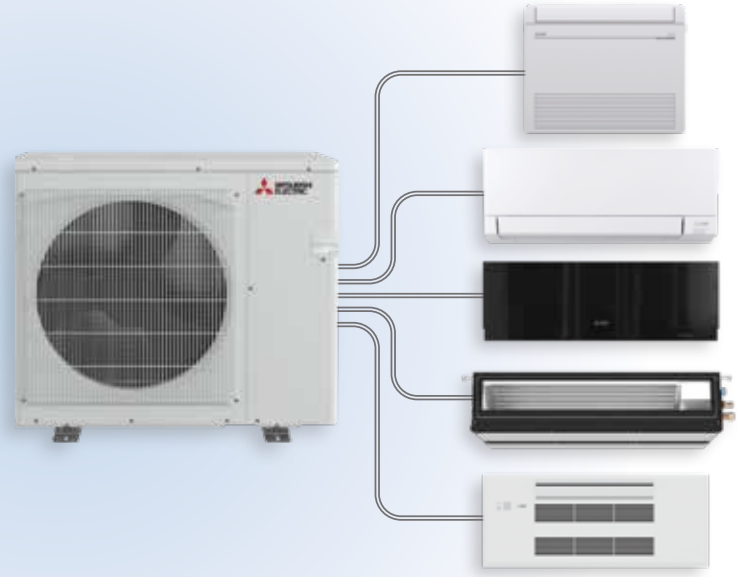
Multi-zone

Outdoor Units



Multi-zone Outdoor Units

Multi-zone systems are designed to provide precise, energy-efficient heating and cooling to multiple indoor spaces, making them an ideal option for numerous applications across residential and light commercial projects. These ultra-quiet units are engineered with a slim footprint and offer reliable performance even in extreme climates.



MXZ Ported Outdoor Units are able to connect up to five indoor units to one outdoor unit without the need for a branch box.

MXZ Ported Outdoor Units do not require any additional refrigerant during installation. All units come factory-charged with refrigerant, ensuring quicker and more streamlined installation and enhanced performance. Maximum piping lengths and height restrictions still apply.

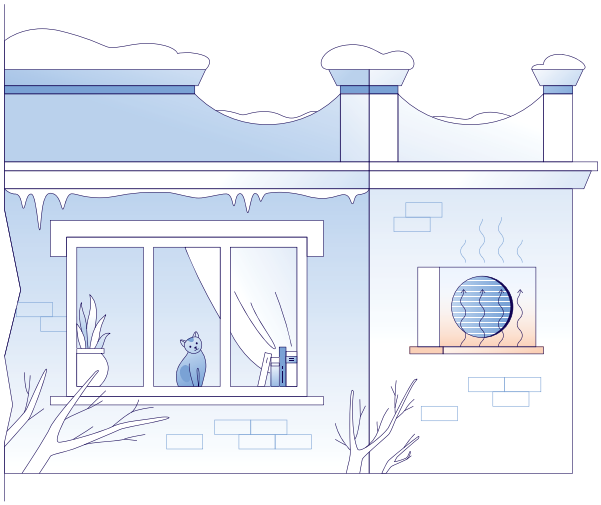
Freeze-prevention Base Pan Heater

The Freeze-prevention Base Pan Heater supports continued performance in low-temperature environments. During the defrost cycle, water is released. The base pan heater prevents this water from freezing and disrupting operation. The base pan heater is added as a safety measure for cold climate zones or for moderate climate zones subject to high humidity during the winter.

The MXZ Ported H2i® Outdoor Units come equipped with base pan heater as standard.

Freeze-prevention Base Pan Heater



MXZ Ported features

Features	
Hyper-Heating Inverter® (H2i®)	Hyper-Heating INVERTER® models provide heating even in ambient outdoor temperatures as low as -13° F, producing up to 100% heating capacity at 5° F. These units offer year-round comfort even in extreme climates.
Freeze-prevention Base Pan Heater (standard)	This advanced base pan heater limits capacity reduction and operational shutdown caused by drain water freezing after a defrost cycle, ensuring reliable performance in low-temperature environments.
Blue Fin Coating	An anti-corrosion treatment applied to the aluminum fins of the heat exchanger of the outdoor unit to protect against corrosion caused by salt, sulfur, and other airborne contaminants, especially in coastal and industrial areas.
Advanced Frost Detection	The fan blade has been optimized in conjunction with the chassis design to increase airflow while reducing sound levels, resulting in lower energy usage and high heat exchange efficiency.
Efficiency	
SEER2	Up to 21
HSPF2	Up to 10
COP at 47° F	Up to 4.3
Capacities	
Standard: 20k – 42k BTU/H	**Hyper-Heating:** 20k – 30k BTU/H

Exceptional efficiency

The MXZ Ported Outdoor Units include ENERGY STAR® and ENERGY STAR COLD CLIMATE combinations*

* Specific combinations qualify, refer to submittals or the AHRI database for efficiency values and ENERGY STAR certified combinations.

1 P-Series 4-way Ceiling Cassette (PLA-AE), and Ceiling-suspended (PCA-AK) models are not compatible with MXZ Ported multi-zone outdoor units.
2 A maximum of 2 PEAD units can be connected (connection of three or more PEAD units is prohibited).
3 Do not use SVZ/PAA and PEAD together on one system.
4 A maximum of 2 PAA units can be connected.
5 When connecting any number of PAA units, the total connected capacity must not exceed 100%.
6 If only PAA units are connected with no other indoor unit type connected to the system, there must be a minimum total piping length of 33 ft. from the outdoor unit to each of the PAA units.

Capacity varies based on the number of indoor units operating and the model of the Multi-zone Outdoor Unit. For reference to connected capacity charts, please refer to Multi-zone Outdoor Unit Operational Performance.
For actual capacity performance based on indoor unit type and number of indoor units connected, please refer to MXZ Operational Performance.
Although the maximum connectable capacity is 130%, the outdoor unit cannot provide more than 100% of the rated capacity.
Please utilize this over capacity capability for load shedding or applications where it is known that all connected units will NOT be operating at the same time.
* Indoor/Outdoor Unit Operating Temperature Range (Cooling Air Temp [Maximum / Minimum]):
• Applications should be restricted to comfort cooling only; equipment cooling applications are not recommended for low ambient temperature conditions.
** Outdoor Unit Operating Temperature Range (Cooling Thermal Lock-out / Re-start Temperatures; Heating Thermal Lock-out / Re-start Temperatures):
• System cuts out in heating mode and automatically restarts at these temperatures.

■ : Standard heat pump
■ : Hyper-heating heat pump

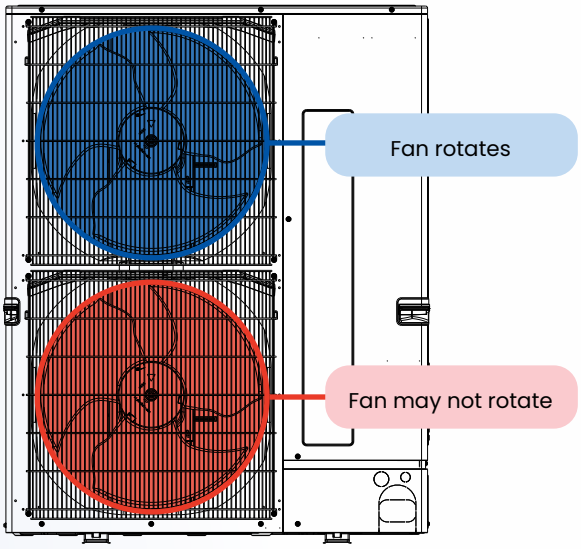
SMART MULTI®

Designed to deliver enhanced performance and flexibility for larger residential and light commercial spaces, SMART MULTI can connect up to eight M- and P-Series indoor units, or up to twelve CITY MULTI® indoor units. The SMART MULTI's minimal footprint allows it to be installed in sites with limited space, such as condominium balconies or low lot line backyards.

Independent fan operation

Depending on the outdoor air temperature and the number of indoor units in operation, only the upper fan of the outdoor unit may rotate and the lower fan may not.

- Only for MXZ-SM36-48NLHZ and MXZ-SM60NL
- This feature is designed to prevent refrigerant noise, and is not indication of a fan failure



SMART MULTI features

Features	
Hyper-Heating Inverter® (H2i®)	Hyper-Heating INVERTER® models provide heating even in ambient outdoor temperatures as low as -13° F, producing up to 100% heating capacity at 5° F. These units offer year-round comfort even in extreme climates.
Flash injection	As temperatures drop outside, the compressor speeds up to maintain indoor comfort. The flash injection process supplies a small amount of cooler refrigerant back to the compressor, reducing excess heat from increased speeds; allowing it to run faster and produce high heating performance. This also enables the system to achieve set points faster, maintain efficiency, and recover quickly after a defrost cycle.
Multi-zone	SMART MULTI Outdoor Units connect to multiple indoor units and provide personalized comfort in multiple spaces. This helps to eliminate problem hot and cold spots in a space and allows for energy to be used only in the zones that need it.
Indoor unit versatility	Connected capacity range: 50% to 130%. Up to 8 M- and P-Series Indoor Units or up to 12 CITY MULTI Indoor Units can be connected to one SMART MULTI Outdoor Unit.
Easy configuration	Dipswitch settings have been added for customized operation and easier service.
Seacoast protection	Seacoast protection is included in all outdoor units. The coated base panel and Blue Fin coated heat exchanger are rated for a duration of 2,000 hours, per ASTM B117 Standard. Blue Fin Coating is a treatment applied to the aluminum fins of the heat exchanger of the outdoor unit to protect against corrosion caused by salt, sulfur, and other airborne contaminants, especially in coastal and industrial areas.
Simple troubleshooting	The USB recorder can store up to 2 weeks of operation data.
Efficiency	
SEER2	Up to 23
HSPF2	Up to 12
COP at 47° F	Up to 4.1
Capacities	
Standard: 36k, 48k, 60k BTU/H **Hyper-Heating:** 36k, 42k, 48k BTU/H	

Powerful. Flexible. *SMART*.

	Maximum number of units	11	12		
	Total system capacity range	50 to 130% of outdoor unit capacity			

Model name	CMY-Y62-G-E	CMY-Y64-G-E	CMY-Y68-G-E
Number of branches	2	4	8

1 All capacities in BU/H
2 The number enclosed in parentheses is the maximum number of units that can be connected when 1 or more PLA/PAA-series units is connected.
3 When connecting 2 SVZ-series units, any other indoor units other than SVZ-series cannot be connected. When connecting 2 SVZ-series unit, the total rated capacity (cooling) should be 100% or below including the SVZ-series unit (only SM60). Also, only 1 SEZ or PEAD can be included in the connection.
4 A maximum of 3 SEZ/PEAD-series units can be connected to a branch box
5 A maximum of 2 SEZ/PEAD-series units can be connected to a branch box. When connecting 1 or more SEZ/PEAD-series units, the total rated capacity (cooling) including the SEZ/PEAD-series units shall be 100% or below.
6 When connecting one or more MFZ-KX09 or PLA-AE12 units, the total system capacity shall be equal to or lower than 105% of the outdoor unit capacity.

[1]Cooling at 95°F (Indoor: 80°F DB, 67°F WB // Outdoor: 95°F DB, 75°F WB)
[2]Heating at 47°F (Indoor: 70°F DB, 60°F WB // Outdoor: 47°F DB, 43°F WB)
[3]Heating at 17°F (Indoor: 70°F DB, 60°F WB // Outdoor: 17°F DB, 15°F WB)
[5]Heating at 5°F (Indoor: 70°F DB, 60°F WB // Outdoor: 5°F DB, 4°F WB)
[9]Heating at -13°F (Indoor: 70°F DB, 60°F WB // Outdoor: -13°F DB, -14°F WB)

- Applications should be restricted to comfort cooling only; equipment cooling applications are not recommended for low ambient temperature conditions.
- A Maximum connected units reduced when PLA connected. Refer to manual for details
- B Branch box should be placed within the level between the outdoor unit and indoor units
- C 5°F DB - 115°F DB when optional wind baffles are installed

For actual capacity performance based on indoor unit type and number of indoor units connected, please refer to MXZ Operational Performance.
Although the maximum connectable capacity is 130%, the outdoor unit cannot provide more than 100% of the rated capacity.
Please utilize this over capacity capability for load shedding or applications where it is known that all connected units will NOT be operating at the same time.

** Outdoor Unit Operating Temperature Range (Cooling Thermal Lock-out / Re-start Temperatures; Heating Thermal Lock-out / Re-start Temperatures):
- System cuts out in heating mode and automatically restarts at these temperatures.

Controls

The Comfort app

Available on the App Store (iOS) and Google Play (Android)

The Comfort app by Mitsubishi Electric gives homeowners complete comfort control like never before. With a sleek, modern interface, the app offers an intuitive and effortless way to manage Mitsubishi Electric cooling and heating systems. From adjusting temperatures to setting schedules and switching between modes, homeowners can enjoy a seamless smart home experience.

The Comfort app is compatible with all Mitsubishi Electric indoor units, including those featuring built-in Wi-Fi. For existing installations, the app works seamlessly with newer Wireless Interface Adapters, such as the PAC-USWHS002-WF-1 and PAC-USWHS002-WF-2.

Units with the older PAC-WHS01WF-E wireless interface adapter will require an upgrade for compatibility.

The Comfort app features

Features	
Upgraded graphics and user interface	The sleek interface includes advanced temperature control and intuitive zone management, complemented by vibrant graphics and helpful, color-coded notifications for a more user-friendly experience.
Simple navigation and support options	With guided user onboarding, the app ensures a reliable and responsive experience with fewer touchpoints. In-app definitions and easy access to FAQs and help articles provide immediate support to homeowners when needed.
Reliability and connectivity	The Comfort app is designed to provide stronger and more reliable connections to your customers' equipment, ensuring optimal performance once set up. However, the strength of the connection is subject to the quality of the user's home Wi-Fi network.
Multi-device setup	Users can easily name zones during indoor unit setup for a personalized experience. Contractors will also benefit from the new app's ability to connect all installed units at once, eliminating the time-consuming process of connecting to each unit individually.
Seasonal scheduling	Homeowners can seamlessly adjust schedules between summer and winter without the need to recreate schedules every season. This feature is especially useful for customers who prefer to manually manage multi-zone transitions rather than relying on the auto-changeover feature.
Comfort Connect	Enhance your customer relationships with the new Comfort Connect feature. By entering your Contractor PIN (your main 10-digit business phone number), your information is automatically stored in the customer's app. In the event of an equipment error, customers can quickly and easily reach out to you directly for support.

MHK2 Wireless Remote Controller

MHK2

- Compatible with the Comfort app
- Touch panel, backlit, easy-to-read display
- RedLINK™ 3.0 wireless technology
- User control of On/Off, mode (cool, heat, dry, fan), temperature (dual set points), fan speed, and airflow direction
- Set temperature range limits
- Multiple scheduling options
- Hold function
- Temporary or Permanent schedule override
- Supports both Fahrenheit and Celsius
- Filter sign display
- Diagnostics: Displays and records error codes
- Adjustable auto mode deadband
- Reset to factory default
- Uses two “AA” alkaline batteries (included)

Wireless Universal Handheld Remote Controller

PAR-SL101A-E

- Now compatible with all M- and P-Series models
- Requires Wireless Receiver PAR-SF9FA for ductless 4-way cassettes
- Requires Wireless Receiver PAR-SA9CA for all other models
- Includes all standard controller features: On/Off control; Mode settings - Cool/Heat/Auto/Fan; Fan speed settings; Vane control (up/down airflow direction)
- Louver control (left/right airflow direction)
- Set a weekly schedule with On/Off cycle per day
- Select individual vane positions on ductless 4-way cassettes
- Direct/Indirect Airflow function to blow air toward or away from users (requires 4-way cassette with 3D i-see Sensor®)

Residential controls

SDW Remote Controller

PAC-SDW01RC-2

- Now compatible with the Comfort app
- Color screen with simple dial control
- Wired communicating connection
- Field supplied 18 AWG wire up to 50 feet
- Standard operation commands
- Multiple scheduling options
- Display and record written error codes
- Auto Dry feature to regulate humidity
- Installer settings for advanced configuration

Thermostat Interface

PAC-US446CN-1

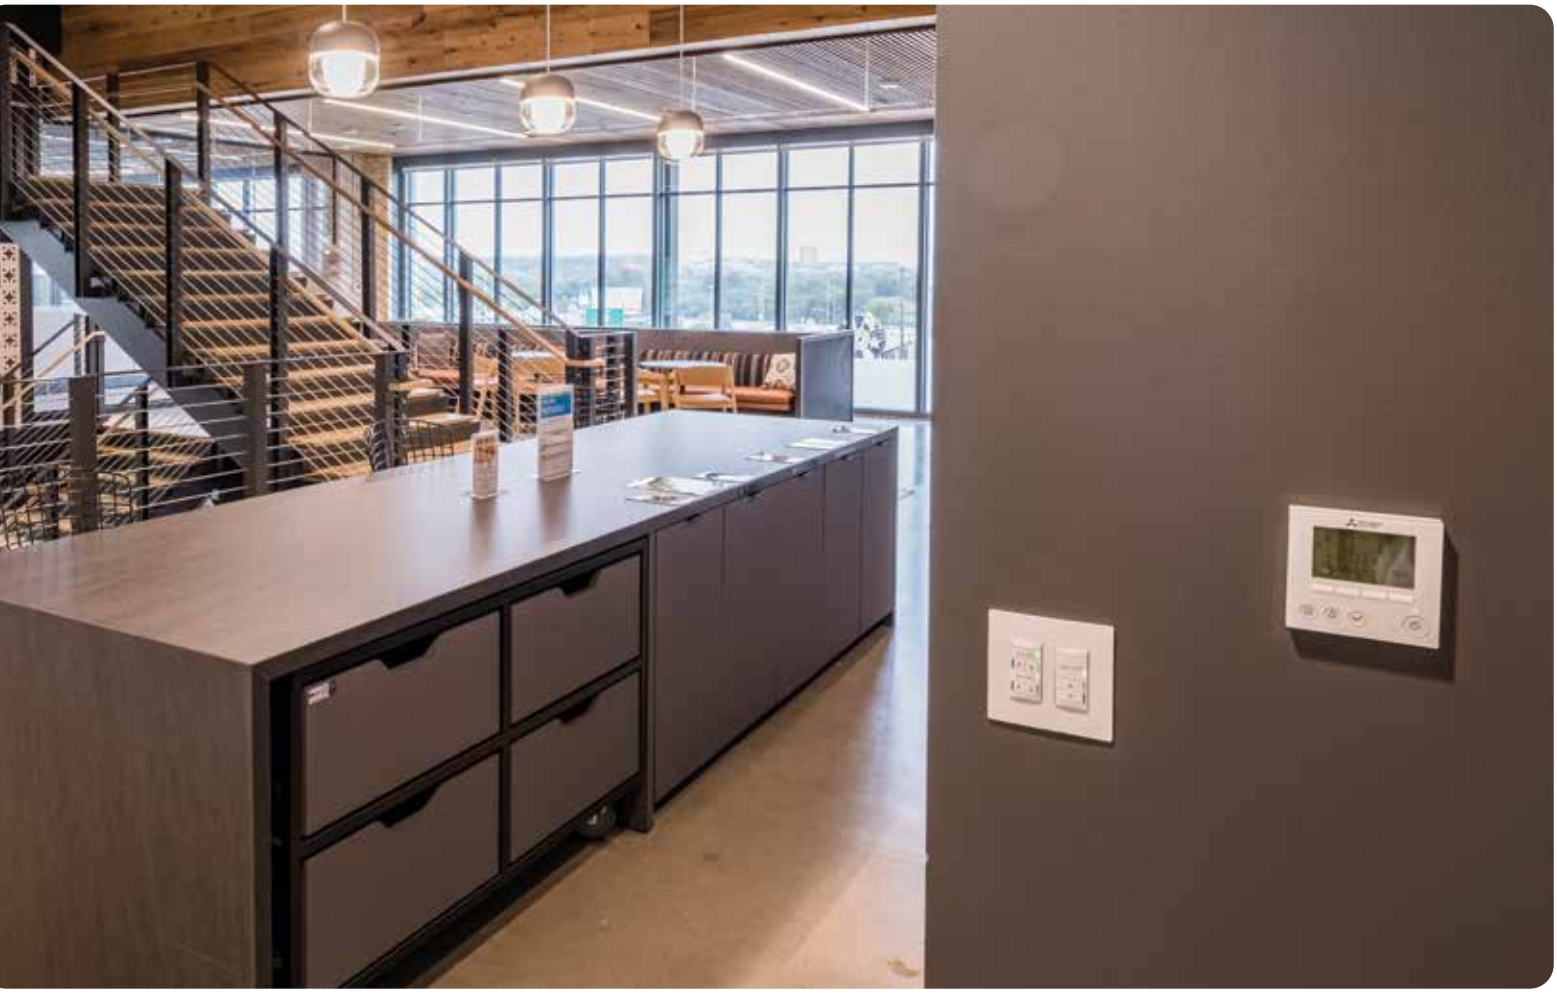
- Control your system using a third-party 24VAC thermostat
- Single and two-stage operation (Y1, W1, Y2, W2)
- Auto and manual fan speed control (G, G1, G2, G3)
- Configure advanced settings by adjusting dip switches
- Integrate with smart home systems when using a smart thermostat
- Includes PAA adapter in the box

MAC-334IF-E System Control Interface

MAC-334IF-E

- Allows M-Series indoor units to communicate with the CITY MULTI® Controls Network via M-Net
- Provides an input to allow remote On/Off control of indoor unit
- Allows use of MI Controllers like the MHK2 and SDW (requires additional 12 VDC power supply)
- Allows M-Series indoor units to connect to a MA controller
- Connects to CN105 on the indoor unit control board
- Device power is supplied by the indoor unit

72°F



Commercial controls

Touch MA Remote Controller

PAR-CT01MAU-SB

- User-friendly, customizable, full-color touch panel display
- Ability to add a custom logo on the display
- Large icons with 180 color patterns
- Daily and weekly timers
- Password protected
- Requires MAC-334IF-E for use with M-Series products
- The MELRemo app and Bluetooth® Low Energy (BLE) technology supports communication with smartphones or tablets in multiple languages. Available on the App Store (iOS) and Google Play (Android)

Deluxe MA Remote Controller

PAR-43MAAUB

- Operation modes: Heat/Cool/Auto/Dry/Off
- Room temperature setting and range restriction
- Manual vane angle (P-Series cassette indoor units)
- Smooth maintenance (P-Series only)
- Auto-off timer and weekly timer
- Setting screen for 3D i-see Sensor®
- Draft reduction mode
- Daylight Saving Time (DST)
- Requires MAC-334IF-E for use with M-Series ductless products
- Room temperature displays the temperature sensed either at the indoor unit (default) or at the controller

Procon BACnet® Interface

PAC-UKPRC001-CN-1

- Allows for third-party home automation/building management system to control indoor unit
- One interface required per indoor unit
- Compatible with MA remote controllers
- Cable length: 37”
- Device power is supplied by the indoor unit

Piping installation terminology

Maximum piping length

This is the maximum allowable length of the refrigerant piping. The amount of refrigerant pipe used cannot be longer than the length specified.

- Outdoor unit - indoor unit
  The maximum allowable length of the refrigerant piping between the outdoor unit and indoor units installed when multiple units are connected to a single outdoor unit. This distance limitation refers to the maximum length between the outdoor unit and the farthest indoor unit.

Pipe length difference from distribution pipe

The maximum allowable difference in refrigerant piping length from the distribution pipe to the farthest indoor unit and, from the distribution pipe to the closest indoor unit when multiple indoor units are connected to a single outdoor unit using a distribution pipe.

- Indoor unit - distribution pipe
  The maximum allowable length of the refrigerant piping between indoor units and the distribution pipe when multiple indoor units are connected to a single outdoor unit.

Maximum height difference

This is the maximum allowable height difference. It is necessary to install the air-conditioning system so that the height distance is no more than the difference specified. (Specified differences may vary if the outdoor unit is installed higher or lower than the indoor units).

- Outdoor unit - indoor unit
  The maximum allowable difference in height between the outdoor unit and indoor units when installed (when multiple indoor units are connected to a single outdoor unit, this distance limitation refers to the maximum height difference between the outdoor unit and an indoor unit).
- Indoor unit - indoor unit
  The maximum allowable difference between the heights of indoor units when multiple indoor units are connected to a single outdoor unit.

Maximum number of bends

This is the maximum allowable number of bends in the refrigerant piping. The total number of bends in the refrigerant piping used cannot exceed the number specified.

- Outdoor unit - indoor unit
  The maximum allowable number of bends between the outdoor unit and each indoor unit when multiple indoor units are connected to a single outdoor unit.

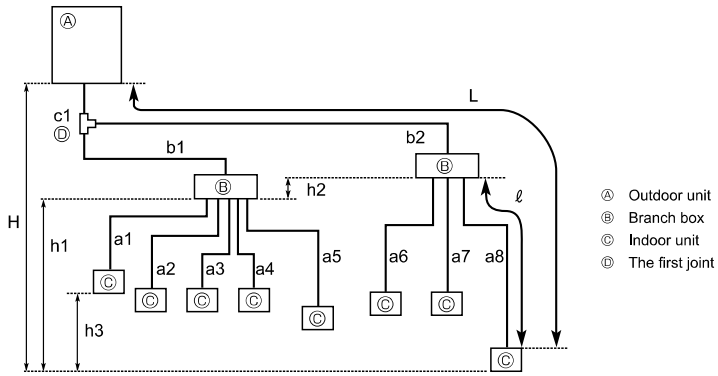
MXZ-SM piping lengths

MXZ-SM36NL, MXZ-SM48NL, MXZ-SM60NL, MXZ-SM36NLHZ, MXZ-SM42NLHZ, MXZ-SM48NLHZ



Permissible length (one-way)	Total piping length	c1 + b1 + b2 + a1 + a2 + a3 + a4 + a5 + a6 + a7 + a8 ≤ 150 m (492 ft.)
	Farthest piping length (l)[1]	c1 + b2 + a8 ≤ 80 m (262 ft.)
	Piping length between outdoor unit and branch boxes	c1 + b1 + b2 ≤ 55 m (180 ft.)
	Farthest branch box from the first joint (b2)	b2 ≤ 30 m (98 ft.)
	Farthest piping length after branch box (l)	a8 ≤ 25 m (82 ft.)
	Total piping length between branch boxes and indoor units	a1 + a2 + a3 + a4 + a5 + a6 + a7 + a8 ≤ 95 m (311 ft.)
Permissible height difference (one-way)	In indoor/outdoor section (h)[2]	H ≤ 50 m (164 ft.) (In case of outdoor unit is set higher than indoor unit)
	In branch box/indoor unit section (h1)	H ≤ 40 m (131 ft.) (In case of outdoor unit is set lower than indoor unit)
	In each branch unit (h2)	h1 + h2 ≤ 15 m (49 ft.)
	In each indoor unit (h3)	h2 ≤ 15 m (49 ft.)
Number of bends		h3 ≤ 12 m (39 ft.)
		| c1 + b1 + a1 |, | c1 + b1 + a2 |, | c1 + b1 + a3 |, | c1 + b1 + a4 |, | c1 + b1 + a5 |, | c1 + b2 + a6 |, | c1 + b2 + a7 |, | c1 + b2 + a8 | ≤ 15

1 The piping specification table does not provide a minimum line set length. However, indoor units with connected piping length less than 16 ft. (5m) could produce intermittent noise during normal system operation in very quiet environments. Please be aware of this important information when installing and locating the indoor unit within the conditioned space.
2 The branch box should be placed within the level between the outdoor unit and indoor units.

Conditions for specifications

Cooling	Indoor	D.B. 80° F (27° C), W.B. 67° F (19° C)
	Outdoor	D.B. 95° F (35° C), W.B. 75° F (24° C)
Heating	Indoor	D.B. 70° F (21° C), W.B. 60° F (16° C)
	Outdoor	D.B. 17° F (-8° C), W.B. 15° F (-9° C)

Temperature conditions are based on AHRI 210/240.

Refrigerant piping length: 16ft. The figures for total input are based on the following voltages.

Series	Indoor Unit	Outdoor Unit
M-Series P-Series MXZ-SM	–	208/230 V single phase 60Hz

The sound pressure measurement is conducted in an anechoic chamber. The actual sound level depends on the distance from the unit and the acoustic environment.

P-Series air outlet coverage range

Points to remember when installing outdoor units

Drainage water considerations

Case 1: Unit is installed close to passage

Avoid placing units near walkways. Drainage water can freeze and create a slipping hazard.

Poor installation

- Frozen drainage water can cause slip hazards.

Good installation

- Mount at a sufficient height to prevent issues caused by frozen drainage
- Choose a location where drainage won't create hazards
- Keep the unit upright to ensure proper drainage

Case 2: Multiple units are installed

Do not stack units. Drainage from the upper unit may freeze on the lower one.

Poor installation

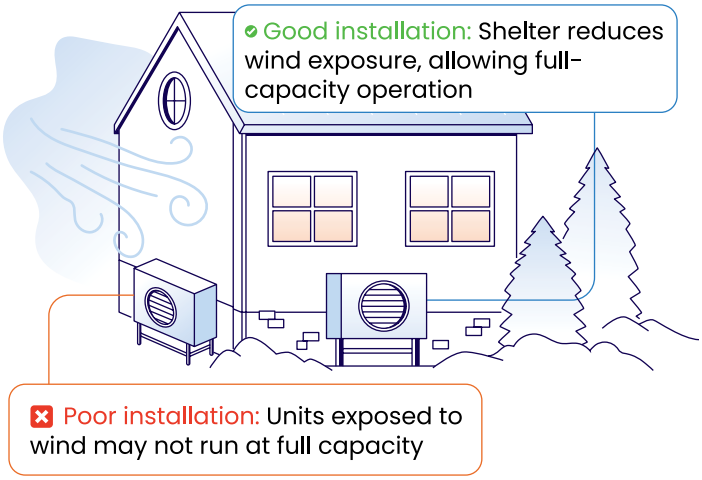
Bottom unit may freeze over

Good installation

Place units side by side

Installation location

Be mindful of prevailing winter winds. Install the unit in a sheltered location to maintain performance.



Considerations for snow

Do not install the unit on the ground

To prevent performance issues caused by snow or frozen drainage, install the unit on a stand to elevate it safely above ground level.

Poor installation

- Unit may become buried due to snowdrift, heavy snowfall, or snow sliding off the roof

Poor installation

- Unit may be damaged due to snowfall or icicles

Good installation

- Install at a height that prevents burial by snow and protects against frozen drainage[1]
- Choose a location that avoids roof runoff, snowdrift, or icicle impact[2]

1. Install at a height above the highest snowfall depth.
2. Even for correct installations, dripping drainage water may form an icicle which needs to be cleared away regularly to prevent a blocked drainage outlet.

Recommended accessories for cold climates

Accessories	Countermeasures for snow	Countermeasures for freezing temps	Comments
Drain Socket, Centralized Drain Pan	Not Used	Not Used	• In cold or snowy climates, drainage may freeze in the a or hose, preventing proper operation. • Don't attach a drain socket as an accessory - it may become blocked by ice.
Stand	Needed	Recommended	• Raise unit above highest expected snow depth • Prevent damage from icicles and ensure proper drainage
Snow Protection Hood*	Needed	Recommended	• Shields heat exchanger from snow • Reduces snow buildup inside the unit • Compatible models vary. Contact Mitsubishi Electric Trane HVAC US or your local dealer for availability and installation guidance.
Base Heater	Recommended	Needed	• Strongly recommended in cold regions and areas with high winter humidity

System control options

	System examples		
Indoor Unit	M-Series Indoor Unit	S- and P-Series Indoor Unit	P-Series Indoor Unit
Outdoor Unit	M-Series and MXZ Series Outdoor	S-Series and MXZ Series Outdoor	P-Series Outdoor
PAR-40MAA control **PAR-42MAAUB control**			
Details	• Wired remote controller can be connected to indoor unit	Standard equipment (for indoor units compatible with wired remote controllers)	
Major optional parts required	• MAC-334IF-E (Interface) • PAR-40MAA (Wired remote controller)	• PAR-40MAA (Wired remote controller)	
System group control	 		
Details	• One remote controller can control plural air conditioners with the same settings simultaneously. • One remote controller can control up to 16 refrigerant systems. (When connected to a MXZ unit, MAC-334IF-E is counted as one system.) • Up to two remote controller can be connected.		
Major optional parts required	• MAC-334IF-E (Interface) • PAR-40MAA (Wired remote controller)		• PAR-40MAA (Wired remote controller)
M-NET connections			Details	• Group of air conditioners can be controlled by MELANS system controller (M-NET). Note: When connecting to M-NET, the reduction control for the power failure automatic recovery does not operate and it will take 3 minutes to restart.		
Major optional parts required	• MAC-334IF-E (M-NET Interface) • MELANS System controller • PAC-SC51KUA (power supply unit)		• PAC-SJ19MA-E/PAC-SF83M/PAC-SJ95MA-E/ PAC-SJ96MA-E (M-NET converter) • MELANS System controller • PAC-SC51KUA (power supply unit)

For M-Series indoor units (new A-control models only)

	System examples	Connection details	Control details	Major optional parts required
1 Remote On/Off Operation • Air conditioner can be started/stopped remotely. (1 and 2 can be used in combination)		Connect the interface to the air conditioner. Then connect the locally purchased remote controller to the terminal in the interface.	On/Off operation is possible from a remote location.	• MAC-334IF-E (Interface) • Parts for circuit such as relay box, lead wire, etc. (to be purchased locally)
2 Remote Display of Operation Status • The On/Off status of air conditioners can be confirmed remotely. (1 and 2 can be used in combination)		Connect the interface to the air conditioner. Then connect the locally purchased remote controller to the terminal in the interface.	The operation status (On/Off) or error signals can be monitored from a remote location.	• MAC-334IF-E (Interface) • Parts for circuit to be purchased locally (DC power source needed) • External power source (12V DC) is required when using MAC-334IF-E.

For P-Series and S-Series indoor units

	System examples		Details	Major optional parts required
	Wired remote controller	Wireless remote controller		
A 2-remote Controller Control With two remote controllers, control can be performed locally and remotely from two locations.	 * Set "Main" and "Sub" remote controllers. (Example of 1 : 1 system)	 * When using wired and wireless remote controllers (Example of Simultaneous Twin)	• Up to two remote controllers can be connected to one group. • Both wired and wireless remote controllers can be used in combination.	• Wired Remote Controller PAR-40MAA • Wireless Remote Controller PAR-FL32MA • Wireless Remote Controller Kit for PCA PAR-SL93B-E
B Operation Control by Level Signal Air conditioner can be started/stopped remotely. In addition, On/Off operation by local remote controller can be prohibited/permitted.	 (Example of 1 : 1 system x 2)	 (Example of 1 : 1 system x 2)	• Operation other than On/Off (e.g., adjustment of temperature, fan speed, and airflow) can be performed even when remote controller operation is prohibited. • Timer control is possible with an external timer.	• Adapter for remote On/Off PAC-SE55RA-E • Relay box (to be purchased locally) • Remote control panel (to be purchased locally)
C Operation Control by Pulse Signal	 (Example of 1 : 1 system x 2)	 (Example of 1 : 1 system x 2)	• The pulse signal can be turned On/Off. • Operation/emergency signal can be received at a remote location.	• Connector cable for remote display PAC-SA88HA-E / PAC-725AD (10 pcs. x PAC-SA88HA-E) • Relay box (to be purchased locally) • Remote control panel (to be purchased locally)
D Remote Display of Operating Status Operating status can be displayed at a remote location.	 (Example of 1 : 1 system)	 (Example of Simultaneous Twin)	• Operation/emergency signal can be received at a remote location (when channeled through the PAC-SF40RM-E → no-voltage signal, when channeled through the PAC-SA88HA-E DC 12V• signal).	• Remote display panel (to be purchased locally) • Connector cable for remote display PAC-SA88HA-E / PAC-725AD (10 pcs. x PAC-SA88HA-E) • Relay box (to be purchased locally) • Remote operation adapter PAC-SF40RM-E *Unable to use with wireless remote controller
E Timer Operation Allows On/Off operation with timer *For control by an external timer, refer to B Operation Control by Level Signal.	 (Example of 1 : 1 system)		• Weekly Timer: On/Off and up to 8 pattern temperatures can be set for each calendar day. (Initial setting) • On/Off Timer: On/Off can be set once each within 72 hr in intervals of 5-minute units. • Auto-off Timer: Operation will be switched off after a certain time elapse. Set time can be changed from 30 min. to 4 hr. at 10 min. intervals. *Simple Timer and Auto-off Timer cannot be used at the same time.	Standard functions of PAR-40MAA
